G2 PLAN · NOVENTIQ · V1 · ROUND 1 · POC-NOVENTIQ-NOVENTIQ-20261026

One customer key, every number traceable to source

Plan for the 10 November demo · POC lead Gourav Mahunta · manager Mrinal Dixit · written 2 November 2026 · G1 approved by Mrinal Dixit on 2 November

A common data layer over Noventiq's three CRMs, three ERPs, payroll and two time tools, built on synthetic copies of those systems. Noventiq's group finance controller sees one account across the CRMs, pipeline in one set of stages, and gross profit for four quarters with every figure cited to its source rows; a quarter close is refused until the three difficult cases are fixed by their owners; account leads turn cited cross-sell and up-sell suggestions into action plans they can accept, edit, accelerate and roll back; and an assistant answers over the same data with citations, including a change just synced from a source system.

Round-2 open questions got no numbered answers, so this plan follows their recommended options (listed in §4) and carries forward only what still needs a person (§5).

1. Storyline

Who is on screen. A UnifyApps presenter in the seat of Noventiq's **group finance controller**, who must sign off gross profit, rebates and reconciliation and does not trust a number without its source; in beat 6 the seat moves to the **country account lead** who acts on cross-sell and up-sell plans. Audience: the group CFO office and the three country leads, 20 minutes (round-2 questions 1 and 2, recommended options).

Story row. Meridian Retail Group, account key `NQ-ACC-0007`, a customer of both Embee and NQ AI in India: linked by tax id in Dynamics 365 (D-ACC-1028) and SAP B1 (SB1-C-1028); its Black and White record "Meridian Rtl Grp" (BW-ACC-7731) and Tally record (T-C-0441) wait as AI-suggested matches at 0.86 and 0.84; child account Meridian Fashion; open pipeline $180,000 plus an unlinked $45,000 Copilot pilot; GP Q1 2026 $37,823; up-sell play "Microsoft 365 E3 to E5 Security, 1,200 seats", score 0.82, about $156,000.

#	BEAT	ROUTE	THE PRESENTER DOES, THE SCREEN SHOWS	ASKS	MODE
1	Account view across three CRMs	`/accounts`	Opens Meridian Retail Group: one key and hierarchy, Dynamics 365 and SAP B1 records linked by tax id, the Black and White and Tally records waiting as AI-suggested matches; tiles show 28 links (20 tax id, 5 name, 3 AI-suggested) and the minutes matching saved; facets show three entities, two countries, easy / typical / hard landscapes.	`A1 A6 A23 A35 A41 A49 A50 A55`	live · matches seeded
2	Pipeline by stage, service and country	`/pipeline`	One group set of stages across the three CRMs; the note shows Creatio's "Qualified" (a first call) counted as Discovery and Dynamics 365's "Qualified" (a confirmed budget) as Qualified; chart by service and country; the "Live from CRM" switch reads the same deals from the CRM records.	`A2 A10 A24 A29`	live · deterministic mapping
3	Gross profit, last four quarters, cited	`/gross-profit`	GP Q4 2025 to Q3 2026 by service, country and customer; clicks Meridian's Q1 2026 GP of $37,823: the citation drawer shows the formula, GP-RULE v1.2, the two SAP B1 invoices and the rebate behind it, each with its sync run.	`A3 A4 A9 A26 A57`	live · Q3 insight seeded
4	Failure beat: Close Q3 2026 refused	`/gross-profit`	Clicks "Close Q3 2026": refused, "Not tied to the ledger: Embee +$38,400, NQ AI +$1,472; 2 blocking exceptions open". Finance's draft rule is tested and breaks where the data breaks.	`A15 A17 A22`	live · deterministic
5	Who fixes exceptions	`/data-health`	The worklist traces each exception to system, source record, sync run, rule and named owner. Arjun Mehta re-attributes the late rebate to Q2; Neha Iyer accrues the 46 missing hours and routes the follow-up to Jira (DEMO-TEST); the Meridian match is confirmed, moving $7,480 of Q3 GP and the $45,000 pilot onto Meridian. Close Q3 2026 now closes: difference $0.	`A16 A18 A28 A34 A36 A59`	live · Jira external bonus
6	Cross-sell and up-sell as action plans	`/plays`	As the account lead, opens PLAY-01: the evidence card cites the E3 renewal, the missing Cybersecurity line in four quarters of invoices and the Copilot pilot; accepts it as a three-step plan, accelerates 7 days, edits a step, rolls back to version 1; the history shows every version, who and when.	`A53 A54`	live · suggestions seeded

#	BEAT	ROUTE	THE PRESENTER DOES, THE SCREEN SHOWS	ASKS	MODE
7	Lean-forward: a source change reaches the cited answer	`/data-health, agent builder`	Edits the Azure landing zone in the synthetic Dynamics 365 to $210,000 at Close, clicks "Sync now" (1 row changed); asks the assistant for Meridian's open pipeline and Q3 GP and where each number comes from: $255,000 and the Q3 GP, each with system, record, sync run and rule; then asks what each NQ AI engineer is paid, and the assistant declines.	`A8 A14 A31 A51 A58`	live agent
H1	How it works, then the matching rules	`/how-it-works, canvas`	The six practical questions answered with the screen that proves each; the Definitions tab (rules, mappings, sync policies, named owners); Noventiq Link accounts opened on the automation canvas.	`A7 A21 A25 A30 A32 A33 A52`	live · read-only
H2	The assistant in the builder	`agent builder`	Noventiq Finance Assistant: its two tools, the order it reads, the rule to cite every number and decline person-level pay, and the model picker as an open choice of models.	`A40 A56`	live · read-only

Alternatives considered for the lean-forward moment: B / C.
B: the action plan rolled back to version 1 with its full history (beat 6): strong for account leads, but it answers only A54. C: the "minutes AI matching saved" tile after Run matching (beat 1): concrete, but small on a projector. **Chosen:** the cited answer after a live sync, because it answers the manager's two sharpest points at once: "finance people do not trust AI without citations" and how a change in any system is reflected in the final response.

AI surfaces and their modes

SURFACE	MODE	WHAT IT IS
Noventiq Finance Assistant	live	The one live agent, read-only; two tools (Account facts, Figure evidence); every number cited; reached from the app through Noventiq Ask assistant.
Cross-sell and up-sell suggestions (Account play)	seeded	Six pre-written suggestions with evidence ids, carrying the AI marker.
AI-suggested customer matches (Account link)	seeded	Three matches at 0.84 to 0.88, carrying the AI marker; the owner confirms.
Q3 AI Insight card on Gross profit	seeded	A pre-written insight naming the late rebate and the missing hours.
Customer matching, stage and service mapping, GP, tie-out	deterministic	Rules (MATCH-01/02, stage and service maps, GP-RULE v1.2); never presented as AI.
"Minutes saved" tile	deterministic	Automatic and suggested links × 12 minutes each (an assumption, shown as such).

2. What gets built

KIND	NAME	WHAT IT IS FOR	BEATS
object	**Source record**	The nine synthetic systems' records with their own ids, codes, last-updated times and sync runs	1 3 5 7
object	**Sync run**	Every sync of a system; the trace from a figure to when it arrived	5 7
object	**Account**	One customer key and hierarchy	1 6
object	**Account link**	Each source customer matched to a key, with method and confidence	1 5
object	**Opportunity**	Pipeline in one group set of stages, with local stage and source	2 7
object	**Definition**	Business definitions, mappings, sync policies, named owners	2 H1
object	**GP line**	GP by quarter, entity, customer and service, with citations	3 4 5
object	**Period close**	Each quarter's tie to the ledger and close status	4 5

KIND	NAME	WHAT IT IS FOR	BEATS
object	**Data exception**	The exceptions worklist, traced to source and owner	4 5
object	**Account play**	Suggestions and the action plans made from them	6
object	**Play history**	Every version of every plan, for roll-back	6
object	**Watchtower Seed snapshot**	Housekeeping: the seed values Reset demo restores	none
automation	**Noventiq Link accounts**	Match source customers to one key (rules, then suggestions, then exceptions)	1 H1
automation	**Noventiq Sync source**	Copy a system's changes into the layer, log the run	7
automation	**Noventiq Compute GP**	Compute a quarter's GP, tie to the ledger, close or refuse	4 5
automation	**Noventiq Fix exception**	Apply the owner's fix and recompute what it touched	5
automation	**Noventiq Route exception to Jira**	Open a DEMO-TEST Jira task for the owner (external bonus)	5
automation	**Noventiq Update play**	Accept, edit, accelerate or roll back a plan, versioned	6
automation	**Noventiq Account facts**	The assistant's read of one account across every source	7
automation	**Noventiq Figure evidence**	A figure with its formula and source rows	3 7
automation	**Noventiq Ask assistant**	Carries a question from the app to the assistant	7
automation	**Noventiq Reset demo**	Housekeeping: back to the seed rows; no screen calls it	none
AI agent	**Noventiq Finance Assistant**	Read-only assistant with citations; model as Nebula recommends	7 H2
code app	**Noventiq Watchtower**	Six screens: Accounts, Pipeline, Gross profit, Data health, Plays, How it works; PRIVATE	all

	PAGES	OBJECTS	AUTOMATIONS	AI AGENTS	TASKS	NEBULA PLANS
This plan	6	12	10	1	63	7
Reference demo	4	3	3	1	about 25	3

Over the reference size, as a flag and not a cut: the manager's feedback adds cross-sell plans, linking, sync and trace-back to the deck's three views. Counts include the housekeeping pair (Watchtower Seed snapshot, Noventiq Reset demo). Tasks: 12 object, 12 seed, 9 automation shells, 10 automation logic, 10 deploys, 1 agent, 1 agent publish, 7 code-app, 1 code-publish; 3-build runs them as 7 Nebula plans of up to 10 tasks.

Capability check

CONTRACT LINE	BEAT	BUILDER	TOOL THAT MAKES IT	READ THAT PROVES IT	
12 objects	1–7	fde-agent	apply_object_batch	get_objects	ok
12 record seeds (≤178 rows each, from files)	1–7	fde-agent	save_entity_records	get_records	ok
9 callable automations (shell, logic, deploy)	1–7	automation-agent	compile_and_save_workflow, deploy_workflow	describe_callable_workflow, search_workflows, trigger_workflow_run	ok
Route exception to Jira (jira_create_issue)	5	automation-agent	Jira connector step on connection 6ababb56…	jira_get_issue on the returned key	ok
Ask assistant (ai_agents_by_unifyapps_invoke_agent)	7	automation-agent	AI agent invoke step	trigger_workflow_run, inspect_workflow_run	ok
Reset demo	none	automation-agent	compile_and_save_workflow, deploy_workflow	trigger_workflow_run counts	ok
Noventiq Finance Assistant	7, H2	agent-builder	create_agent, add_tools, publish_agent	get_agent, send_test_messages	ok
Noventiq Watchtower, shell and six screens	all	code-app-agent	create_code_app, create_code_app_data_sources, push_code_patch	get_code_app head.sha, bindings.ts, callables.ts	ok

CONTRACT LINE	BEAT	BUILDER	TOOL THAT MAKES IT	READ THAT PROVES IT	
Publish Noventiq Watchtower	all	code-app-agent	publish_code_app	deployed: true with commitHash	ok

The code app cannot call an AI agent directly (its dataSources are Storage and automations only), so the agent drawer calls Noventiq Ask assistant. The Nebula spec check passed with no issues and no warnings.

3. Data

Source: synthetic and fictional, shaped like each source system, generated by a seeded script so totals add up and the story numbers are fixed. **Masking:** none needed: every company, person and id is invented; no emails or phones; payroll held at team level only. Amounts in USD; INR converted at 84.00 per USD, fixed for the POC.

The synthetic source systems, by entity and country (A50, A51, A41)

ENTITY	COUNTRY	LANDSCAPE	CRM	ERP	TIME	PAYROLL
Embee	India	typical	Dynamics 365	SAP B1	Zoho Projects	Payroll India
NQ AI	India	hard	Black and White	Tally	Azure DevOps	Payroll India
Entity C (NetSuite + Creatio)	Country C (to be named, §5 Q2)	easy	Creatio	NetSuite	NetSuite	NetSuite

All nine systems live in one Source record object, keyed by system and source id, each record with its own id format (D-ACC-..., SB1-INV-..., BW-OPP-...), local codes, last-updated time and the sync run that brought it. One store instead of nine objects shows linking, sync and trace-back the same way and keeps the build smaller (a plan decision).

OBJECT	ROWS	HOW THEY GET IN
Source record	178	seed from file: 14 CRM accounts, 14 ERP customers, 77 invoices, 12 rebates, 21 timesheets, 8 payroll costs, 12 ledger GP rows, 20 opportunities
Sync run	10	seed from file; SR-0310 the failed Azure DevOps run
Account	13	named rows; NQ-ACC-0007 Meridian Retail Group the story row
Account link	28	seed from file: 20 tax id, 5 name, 3 AI-suggested (2 waiting)
Opportunity	20	named rows
Definition	17	named rows: GP rule, standard rates, FX, match rules, stage and service maps, sync policies, exception rule
GP line	77	seed from file: Q4 2025 to Q3 2026
Period close	4	named rows; Q3 2026 open
Data exception	6	named rows: the three difficult cases plus a stage conflict, an unmapped code, a failed sync
Account play	6	named rows, AI marker
Play history	2	named rows
Watchtower Seed snapshot	1 per seeded row	written once by the seed tasks

Every row carries origin: seed, test (checks and the recording) or user (people in the demo). Reset demo clears test rows, restores seed rows from the snapshot and never touches user rows. Expected assistant answers: 6 fact rows and 2 refusal rows in noventiq.eval.csv.

4. Intent and coverage

Proposed intent: both, the outcome first and then how it works, in two hood beats after the lean-forward beat. Half of the manager's G1 asks are about the mechanism (linking, agent context, citations, sync, trace-back: A55 to A59) and the deck asks for the six practical questions answered (A52); the outcome alone would leave them unshown, and a platform-only demo would bury the finance story. The owner sets it (§5 Q1).

The six practical questions, answered (A52, deck p.10)

#	QUESTION	ANSWER IN THIS DEMO	SHOWN IN
1	Can we get the data?	Yes, only what each view needs (A7): nine synthetic systems, each with its own ids and codes, pulled into one Source record store with a sync run per pull.	Beat 7, Data health · Source systems; H1

#	QUESTION	ANSWER IN THIS DEMO	SHOWN IN
2	Can we make it consistent?	One customer key (tax id first, name and address at 0.85 second, else an exception), one group set of stages, local service codes mapped to one catalogue, each mapping a Definition with a named owner.	Beats 1, 2; H1 Definitions
3	Can Finance trust it?	Every figure carries its formula, rule version and source rows; a quarter closes only when each entity ties to its ledger to the dollar.	Beats 3, 4, 5
4	Can we keep it running?	Nightly copies, a failed run retried once then raised to its owner, every exception traced to system, record and sync run, fixed by Noventiq's own people.	Beat 5; Data health · Sync runs
5	Copy or read live?	Copy for month-end gross profit (stable, reconciled); a deal's current status read live from the CRM, and copied on Sync now or nightly.	Beat 2 (Live from CRM), beat 7
6	What does scaling cost?	Out of this demo: effort per system and country belongs to Deliverable 5 (A42 to A45, out of scope). The demo shows the unit of work per new system: one Source record mapping, its Definitions and one sync policy.	H1; plan only

The manager's G1 feedback, answered (FB-1793291553836-1)

ASK	FEEDBACK	HOW THE PLAN ANSWERS IT
A49	Business model, persona, pain points	Noventiq resells licences and cloud, earns vendor rebates and sells services, and grew by acquisition, so each entity kept its own CRM, ERP and time tools. Persona: the group or country finance controller; secondary the account lead. AI features follow: cited answers, suggested matches, cited cross-sell plays.
A50	Which countries	India (Embee typical, NQ AI hard) and the easy entity's country, a placeholder until named (§5 Q2).
A51	Synthetic source systems	Nine synthetic systems (§3), with their own ids, codes and sync runs.
A52	Six practical questions	The table above, and the How it works screen.
A53	Cross-sell and up-sell per account, with evidence	Account plays with evidence ids from CRM deals, ERP invoices and GP gaps (beat 6).
A54	Traceable action plans: accelerate, roll back, edit	Every change writes a Play history version first; roll back restores any version (beat 6).
A55	Linking disjointed data into one account truth	Noventiq Link accounts: MATCH-01 tax id links automatically; MATCH-02 name and address 0.85 or more is suggested for the owner; below that an unmatched-customer exception. GP lines and deals follow the key (beats 1, 5, H1).
A56	How logic and context flow inside the agent	The app sends the question with the screen and account; the assistant resolves the account (Account facts: links, deals, GP lines, plays, exceptions), then fetches each figure (Figure evidence: formula, rule, source rows, ledger tie), and answers citing each number (H2).
A57	Evidence on every financial calculation	Every GP line stores its source ids; Figure evidence returns them with system, record, sync run and rule version; the screen and the assistant both show them (beats 3, 7).
A58	Data sync and how a change reaches the answer	SYNC-01 nightly copy for ERP, payroll and time; SYNC-02 live read of deal status, copied on Sync now; beat 7 edits a source deal, syncs, and the assistant's answer cites the new sync run.
A59	Tracing errors back to source	Every exception stores its system, source record, sync run and rule; a failed sync run becomes an exception for the system's owner (beat 5).

The look

Colour sampled from Noventiq's own header logo on noventiq.com: 🟦 **#0B408B navy** (used, hue 215), 🟦 #25AADD sky and 🟥 #E31D22 red (the other candidates). The site's pages refuse plain fetches and its stylesheets hold no colour variables, so the logo file was the source; the profile's standing answer takes the recommended colour. Logo: the site's own SVG, used as published. Light theme, brand rail, glass surfaces, comfortable density.

External step. When an exception is routed to its owner (beat 5), a DEMO-TEST task is created in the existing UnifyApps test Jira (project SAM1); probed read-only on 2 November. Off the critical path: if Jira does not answer, the exception says "routed in the app only" (§5 Q6).

Defaults this plan used (round-2 recommended options)

Audience and presenter (Q1) · persona (Q2) · countries with a placeholder (Q3) · one store for the synthetic systems (Q4) · views: account with cross-sell and plans, pipeline, gross profit (Q5) · plans live in the app with full history (Q6) · six questions in this plan and a How it works screen (Q7) · Creatio on screen (Q8) · go on without the call (Q10) · exceptions worklist in the story (Q11) · deliverables out of scope (Q12) · dashboards plus assistant (Q13) · Gourav Mahunta owns all asks (Q14). Also: USD with INR at 84.00, calendar quarters with Q3 2026 being closed, standard rates $28 / $32 / $55 per hour, the model as Nebula recommends, PRIVATE, publish and deploy without asking.

5. Open questions

For Gourav Mahunta: answer by number in the G2 thread. The recommended option is first; the build goes ahead on it unless you say otherwise.

NO.	QUESTION	OPTIONS
1	Which intent should the demo take?	(a) recommended: **both**: the outcome first, then two hood beats (How it works and the matching rules; the assistant in the builder) (b) use-case: the outcome only, no hood beats (c) platform: 2 to 4 hood beats and a one-line description on every node and field
2	Which country is the third POC entity (NetSuite + Creatio, easy landscape) in? (A50)	(a) recommended: **keep "Country C (to be named)"** on screen and rename it in a feedback round (b) name the country now
3	Confirm the slot (A5): 10 November, 20 minutes, a presenter in the group finance controller's seat, to the group CFO office and the three country leads?	(a) recommended: **yes, as planned** (b) another audience, presenter or length
4	The deck asks for a prototype on real data used by real people (A20), and privacy must be cleared before data moves (A39). For 10 November?	(a) recommended: **synthetic data now**, labelled as sample data; client extracts in a feedback round once privacy is cleared (b) hold the build for client extracts
5	The recording "Noventiq Use Case.mov" is still not read (Google Drive link, Drive not connected).	(a) recommended: **re-upload it to #noventiq_internal or connect Google Drive** so a feedback round reads it; the plan goes on meanwhile (b) proceed without it
6	Routing an exception writes a DEMO-TEST task into the shared UnifyApps test Jira (project SAM1). Use it?	(a) recommended: **yes**, labelled DEMO-TEST and listed for clean-up in the handover (b) skip the Jira step and route in the app only
