HOW DELIVERY RUNS TODAY

Today's challenges: *why go-lives slip*.

Delivery director

Hears a project is at risk close to its go-live date.

Resource manager

Books consultants already on too many projects at once.

Customer sponsor

Signs off stage deliverables after they are due.

Implementation lead

Writes each weekly status report by hand, about an hour each.

VP of customer success

Needs headline numbers and what changed, every Monday.

WHERE IT BREAKS DOWN

Migration runs late
Data migration takes longer than planned.

Sign-offs stall
Customers sign off a stage after its due date.

People overbooked
Consultants are booked on too many projects at once.

Reporting by hand
Status reports take about an hour each.

=

THE RESULT

- Go-lives slip
- Warning comes too late

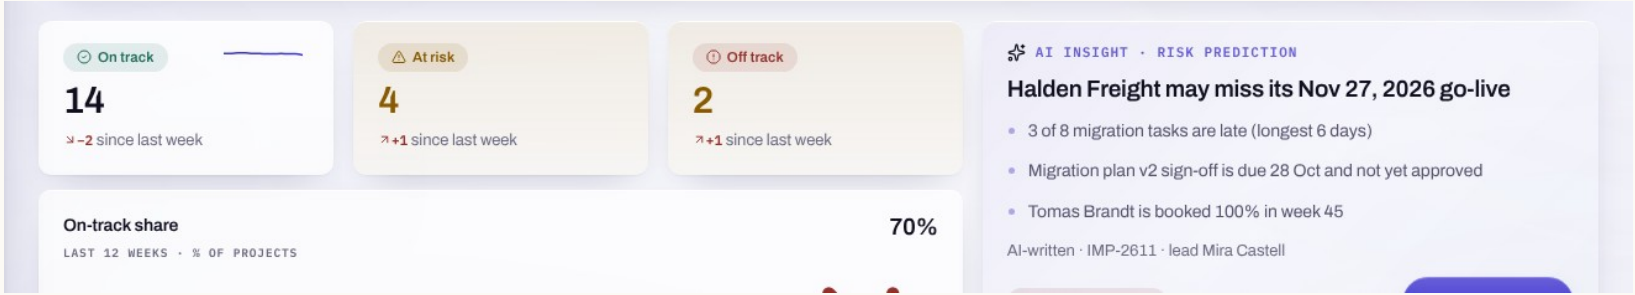

FROM PORTFOLIO RISK TO PUBLISHED REPORT

Reinvented: *one record, from risk to report.*

Risk flagged on Portfolio
AI-written, with confidence and evidence

Capacity checked first
Over 100% refused before saving

Report drafted by AI
The lead edits, then publishes

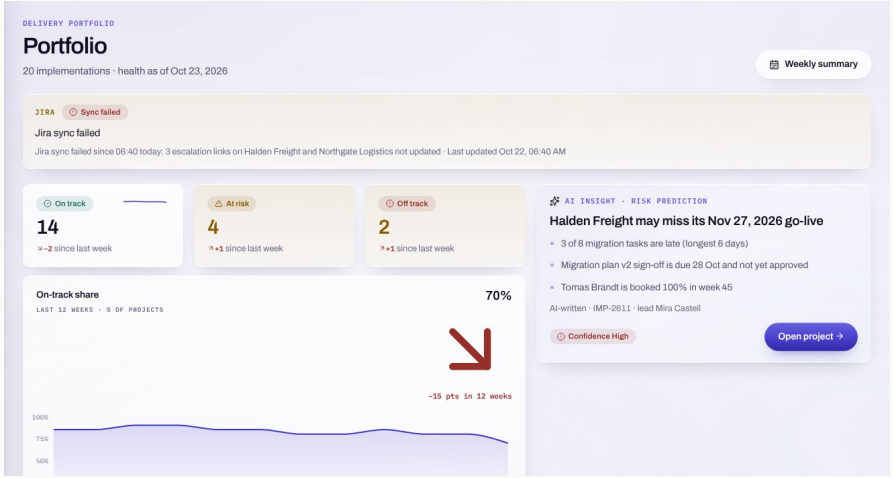

39 sec
From question to an AI-written status draft

48 h
Change routed to director, then finance

120%
Booking refused before saving, with the weeks and hours over

WHAT THE DELIVERY DIRECTOR GETS

Every project's health, *with the risk named*.

Portfolio, as the director sees it

From the demo: 14 on track, 4 at risk and 2 off track, with Halden Freight flagged High.

Health at a glance

On track, At risk and Off track, with the change since last week.

Risk flagged early

An AI-written risk card with a confidence level and the evidence behind it.

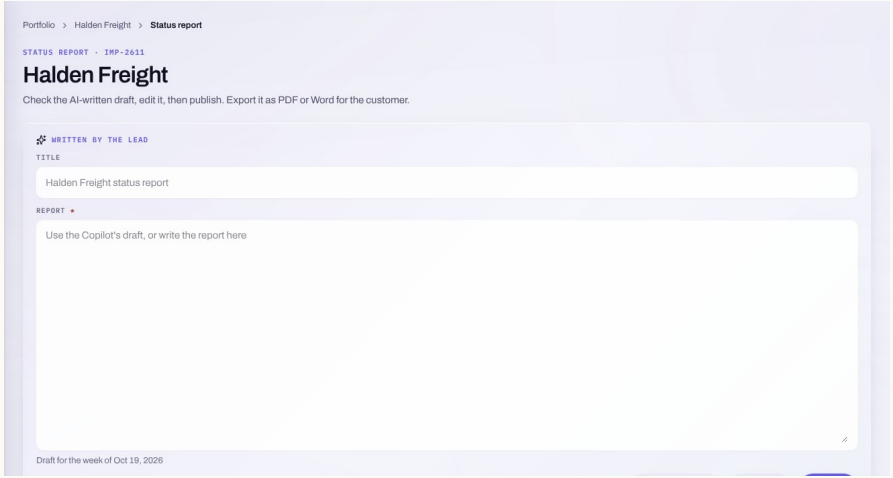

Risks by likelihood and impact

A grid of the open risks, RSK-1183 at likelihood 4.

Filters that stick

Region, stage, health and lead as removable chips.

The weekly report, *drafted for you*.

The status report editor

From the demo: the editor where the lead edits and publishes Halden Freight's report.

Board by stage

Seven stages, a column limit, and a keyboard path for every move.

Scope changes with a diff

Before and after plans side by side, routed to the right approvers.

AI-written draft

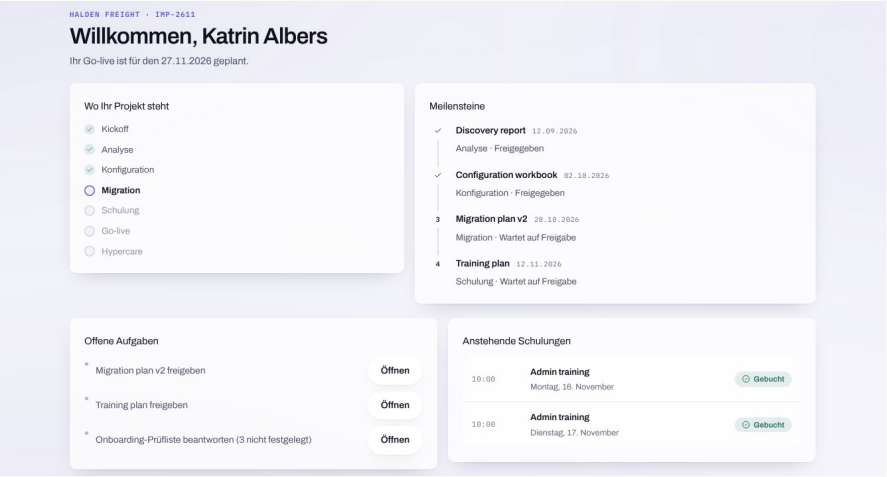

Delivery Copilot drafts the status report from tasks, risks and time.

Nothing published unseen

The lead edits the draft and publishes it; the Copilot cannot write.

WHAT THE CUSTOMER SPONSOR GETS

Their rollout, *in their language*.

The portal in German

From the demo: Katrin Albers sees Halden Freight only, with Migration plan v2 due 28.10.2026.

Only their project

Stage, milestones, sessions, open actions and shared documents.

In German

Portal screens and dates the German way, like 28.10.2026.

Sign-off with a record

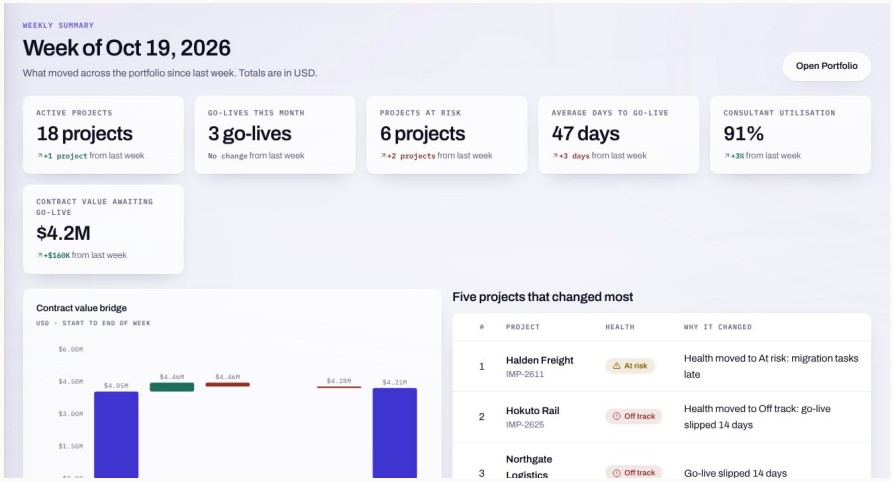

Sign off a deliverable; who approved and when is kept.

Internal health stays inside

Internal health scores are never shown to the customer.

WHAT THE VP OF CUSTOMER SUCCESS GETS

Monday's numbers, *and what moved*.

The weekly summary

From the demo: 6 projects at risk, 2 more than last week, shown as bad.

Six headline numbers

Each with its change from last week, coloured good or bad for the business.

Contract value bridge

From 4.05 million at the start to 4.21 million at the end, in USD.

What changed most

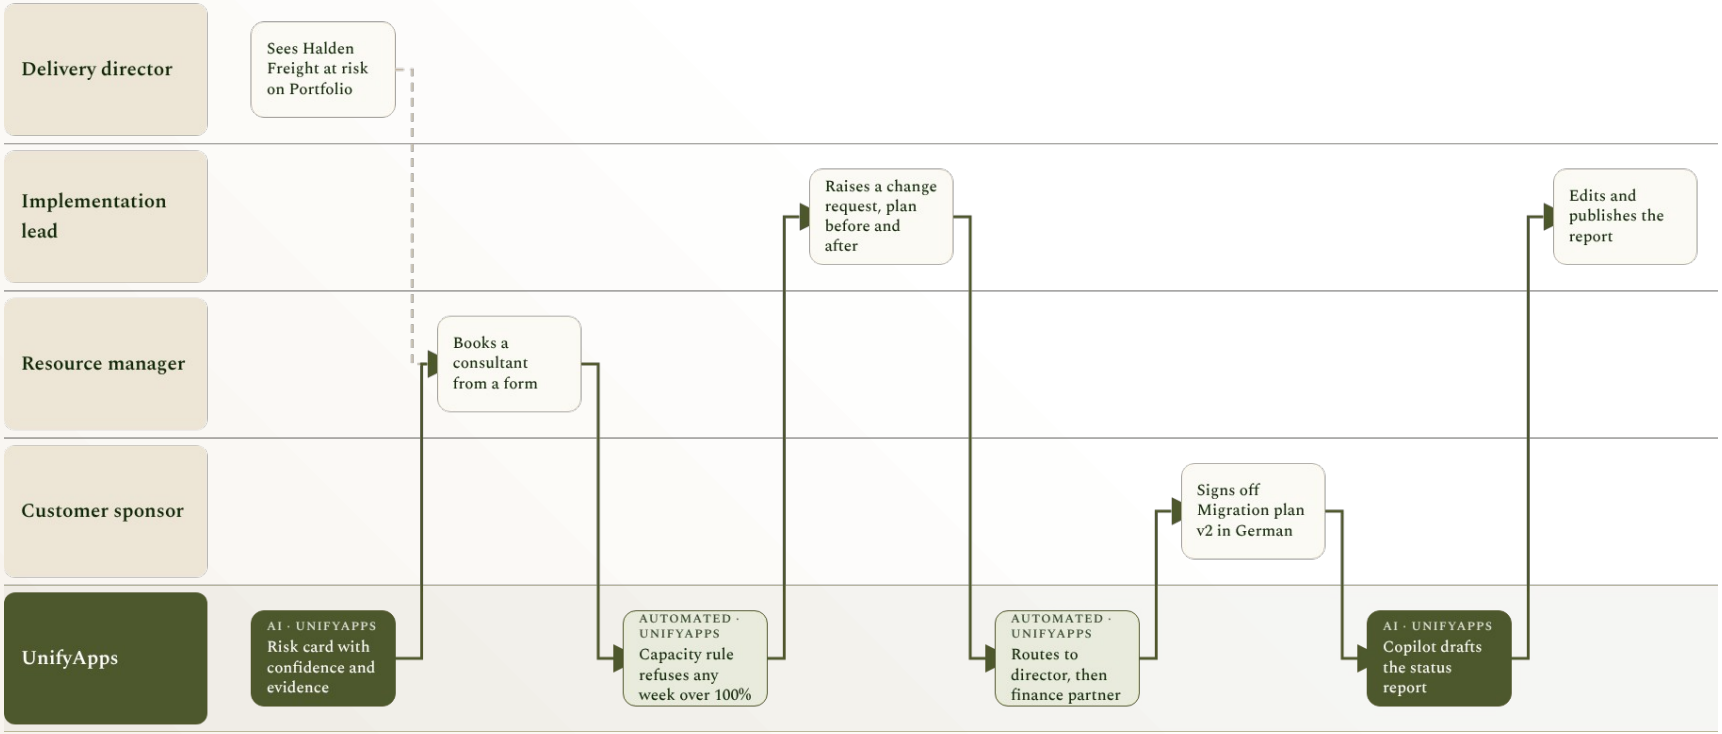

The five projects that moved most, each with its reason.

Monday 08:00 email

A sample of the summary each region receives at 08:00 local time.

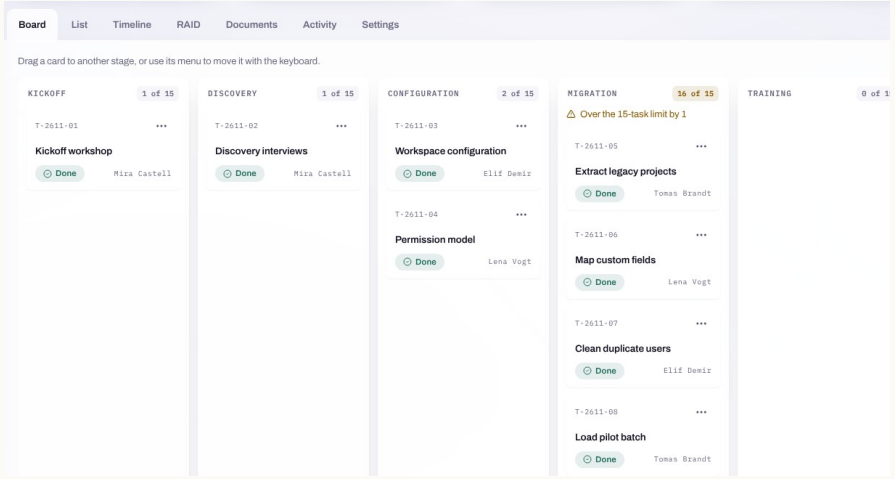

HOW IT WORKS WITH UNIFYAPPS

With UnifyApps: *from risk to report on one record.*

NEXT STEPS

From proof of concept *to a pilot*.

Halden Freight's board

From the demo: the board by stage, with Migration over its 15-task limit.

Agree the pilot

Pick a delivery region and its live projects.

Connect your systems

Salesforce, Slack, Google Drive and Jira, connected at go-live.

Customer sign-ins

Sponsors sign in to see only their own project.

Roll out by region

Region by region, with the weekly summary as the measure.
