Requirements · Noventiq

Client Noventiq · use case Noventiq · version 1 · round 1 · POC POC-noventiq-noventiq-20261026 · harvested 2026-10-26 · POC lead Gourav Mahunta · manager Mrinal Dixit

1. Summary

Use case	A common data layer over Noventiq's CRMs, ERPs, payroll and time tools that answers business questions as dashboards and a digital assistant: account view, pipeline, gross profit (with utilisation, booking forecast and vendor rebates also listed). Demo date: 10 November.
Asks added	48: 5 P0 · 36 P1 · 7 out of scope
Sources read	#noventiq_internal, whole history (16 messages, 2 threads, 4 forwarded messages); #p_noventiq, read whole as the context of the forwarded messages (21 messages); 10 images shared in #p_noventiq (photos of the client's POC deck); psl_document rows of this POC (none); open psl_feedback rows of this POC (none); Gmail (no thread names Noventiq, Embee or the client's domain)
Not read	Noventiq Use Case.mov (recording, Drive link): not read, Slack refused the file 3 times (13:20:52, 13:22:10, 13:26:16 UTC; the 4th attempt was not made before the stage closed) and the Drive copy needs a signed-in account, with Google Drive not connected in this session Google Calendar: not read, the connector needs the person to sign in again Gate threads: none yet (first G1)

Size hint

Kind	Count	What, and the asks behind it
Objects	7	Customer, one key across the source CRMs (A1, A23, A35) Opportunity and pipeline stage, mapped to one group set (A2, A24, A29) Service catalogue and local-code mapping (A2, A25) Gross-profit line by quarter, service line, country, customer (A3, A9, A26) Data exception with owner (A15, A16, A28, A36) Vendor rebate (A13) Project and timesheet (utilisation) (A11, A27)
Automations	3	Match customers across CRMs to one key (A1, A23, A35) Compute gross profit and reconcile it to the accounts, with a trace to source (A3, A4, A17, A34) Detect exceptions and route each to its owner (A15, A16, A28, A36)
AI agents	1	Digital assistant answering over the account, pipeline and gross-profit data (A14, A31, A40)

Seen in shared media

Context, not asks: what each image shows. Every image is a still photo; no frame times apply.

File	What it shows
WhatsApp Image 2026-10-23 at 5.48.08 AM (2).jpeg	Deck p.5, "Connecting systems is the easier part": topic / problem today / POC must settle for customer, pipeline, services, gross profit, people cost, ownership (photo of a slide)

File	What it shows
WhatsApp Image 2026-10-23 at 5.48.08 AM (1).jpeg	Deck p.7, three layers: reports and AI assistants over a common data layer owned by Noventiq over today's CRM, ERP, HR, payroll and time tools
WhatsApp Image 2026-10-23 at 5.48.07 AM (3).jpeg	Deck p.9, the three POC landscapes: easy (NetSuite + Creatio entity; Creatio, NetSuite, local payroll, Zoho Projects), typical (Embee; Dynamics, SAP B1, DarwinBox/local, Zoho Projects), hard (NQ AI; Black and White, Tally, payroll to confirm, Azure DevOps)
WhatsApp Image 2026-10-23 at 5.48.07 AM.jpeg	Deck p.10, six practical questions: get the data, make it consistent, can Finance trust it, keep it running, copy or read live, scaling cost
WhatsApp Image 2026-10-23 at 5.48.07 AM (2).jpeg	Deck p.02 timeline: five phases over weeks 1 to 16 (set up, connect and map, test and fix, design and cost, decide)
WhatsApp Image 2026-10-23 at 5.48.07 AM (1).jpeg	Deck p.14 shown in a Teams call: Deliverable 1, sequencing options (by business question, function, country, system type, dataset)
WhatsApp Image 2026-10-23 at 5.48.06 AM (1).jpeg	Deck p.15, Deliverable 2: definitions table (customer key, pipeline stages, service catalogue, gross profit, cross-border credit, utilisation) with who decides each
WhatsApp Image 2026-10-23 at 5.48.06 AM.jpeg	Deck p.16 shown in a Teams call: Deliverable 3, decisions on where data sits, hard systems, customer master, AI, security, platform; data-residency watch-out
WhatsApp Image 2026-10-23 at 5.48.05 AM (1).jpeg	Deck p.17, Deliverable 4: what the prototype must show, the test report contents, the difficult cases
WhatsApp Image 2026-10-23 at 5.48.05 AM.jpeg	Deck p.18 shown in a Teams call: Deliverable 5, cost to build, cost to run, value, and in-house / external / hybrid build options

3. Open questions

For the POC lead. The recommended option is listed first.

No.	Question	Options
1	Which three business views does the 10 November demo show (A6 says 3 business views, A9 to A13 list five)?	**(a) recommended:** The deck's "What it must show": account view across three CRMs, pipeline by stage, service and country, gross profit for the last four quarters (A1 to A3) (b) Revenue watchtower, sales watchtower and vendor funding and rebate tracking (A9, A10, A13) (c) All five business questions, the two extra ones at lower depth
2	The deck asks for "a working prototype on real data" (A20); the profile says fictional seed data. Which data does the demo use?	**(a) recommended:** Fictional data shaped like the client's systems (Creatio, Dynamics, Black and White; NetSuite, SAP B1, Tally), labelled as sample data (b) Wait for sample extracts from the client before G2 (c) Fictional data now, swapped for client extracts in a feedback round
3	Which entities or countries appear in the demo (A6, A41)?	**(a) recommended:** The deck's three landscapes: the NetSuite + Creatio entity (easy), Embee (typical), NQ AI (hard) (b) Three countries the lead names
4	The CRM is written "Cresio" in the internal note (A8) and "Creatio" on the client's slide. Which name is used on screen?	**(a) recommended:** Creatio (b) Another name the lead gives
5	The recording "Noventiq Use Case.mov" could not be read (Slack refused the file; the Drive link needs a signed-in account and Drive is not connected here). How to proceed?	**(a) recommended:** Re-upload it to #noventiq_internal or connect Google Drive, so the next round reads it; go on with G1 meanwhile (b) Proceed without it
6	Ashish Jha offered a short call with Mrinal Dixit to give the use case, and the Cognizant business model as a reference (#p_noventiq, 2026-10-26). Wait for it?	**(a) recommended:** Proceed to G2 now; fold what the call gives into a feedback round (b) Hold G1 until the call has happened
7	The deck's "test the difficult cases" (A15, A16, A36): make an exceptions worklist part of the demo story?	**(a) recommended:** Yes: unmatched customer, rebate booked a quarter late and team with missing timesheets, each with a named owner who fixes it, as the story row (b) Keep as P1, shown only if time allows
8	Deliverables 1, 3 and 5 and the four-month programme (A42 to A48) are consulting deliverables, not the demo app, and were marked out of scope. Agree?	**(a) recommended:** Yes, keep them out of scope (b) Promote some (reply promote A<n>), e.g. a cost-to-scale view
9	The UI reference "insurance claim AI accelerator" (A14) was not shared in any source read. Which shape does the demo follow?	**(a) recommended:** Dashboards plus a digital assistant over the same data, as A14 and A31 describe (b) The lead shares the accelerator so the plan can follow it

No.	Question	Options
10	Every ask's proposed owner is the POC lead; Amogh Gupta tagged Mrinal Dixit and Gourav Mahunta with "need to pick this". Who owns the asks?	**(a) recommended:** Gourav Mahunta owns all asks (b) Split between Gourav Mahunta and Mrinal Dixit (the lead names which)

4. Other use cases mentioned

Reply “promote A<n>” in the G1 thread to bring one into this use case.
