UnifyApps · Pipeline Factory v1 — handover

Version 1, round 2 · 2 November 2026 · built on orbit.uat.unifyapps.com · for Gourav Mahunta (manager and presenter)

BEATS SEEN ON SCREEN	QUESTIONS	SLOWEST ANSWER	BUILT
0 of 8	10 of 10	58 s	3 · 13 · 25 · 39
not verified: the screens ask for a sign-in	passed in the final check	target 90 s	screens · objects · automations · AI agents

What changed in this round

You asked us to build all 38 agents and the 12 workflows. They are now built and live: each agent is its own UnifyApps AI agent with one job, and each workflow its own automation with no AI in it. Every agent reads only through one shared step (Read component inputs) and writes only through another (Save agent output), which applies the hand-off contract and saves every hand-off the same way as round 1. On Control tower, the Components tab now links each of the 50 rows to its live agent or automation, shows its last runs, and runs it on an account from its drawer. The round-1 screens and story are unchanged.

Scope

One account, Carrow & Vale Logistics, moves through the Pipeline Factory: a strong signal takes the fast lane, Gate 1 accepts it, research and the buying team arrive as confidence-scored hand-offs, Gate 2 approves drafts while the Send Rules Check refuses one, and the booked meeting locks its fields. Every agent hands off through the context graph, never directly: each hand-off is a saved record a person can see, check and stop. Behind the story, every one of the 38 agents and 12 workflows can be run live on an account from the Components tab.

The asks it covers

ASKS	THE ASK, SHORT	BEAT
A1	38 single-job agents and 12 workflows, connected only through the context graph	1, H1

ASKS	THE ASK, SHORT	BEAT
A2	The fast lane: a strong signal starts a play within the hour	2
A3, A75, A77 to A82	The learning loop: proposals only, checked by the Quality Grader	Components tab
A4	Every hand-off can be seen, checked and stopped by a person	1, 7
A5 to A7, A92	Hand-off contract: registered, one writer per field, schema check on save	H1
A8	Confidence gate: below threshold goes to the named person's to-do list	3, 7
A9	Idempotent: one save, one enrolment per account, person and play	5
A10 to A12	On time, traced, patch-keyed: Patch ID, confidence, model, cost and latency on every hand-off	1
A13	Model split: every checker on a different model family	Components tab
A14	Locked fields at booking; corrections go through RevOps	6
A15 to A25	Account foundation: the ten sub-workflow 1 agents, each runnable on an account	Components tab
A27 to A34	Account selection: signals, timing score, ranking, slots, holdout, Gate 1, checked-visit rule	2, 3
A35 to A42, A99	Research and buying committee: sourced facts, use cases, Case for Change, people and notes	4
A43 to A45	Intro Finder, Contact Finder, Do-Not-Contact List	Components tab
A47 to A59, A83	Outreach: play, page, content, drafts, fact check, grade, Send Rules Check, launch, planted errors	5, Components tab

ASKS	THE ASK, SHORT	BEAT
A60 to A63	Calls, follow-up, inbox health and domain swaps	Components tab
A66 to A74, A101	Replies, booking, prep pack, meeting label, qualification, deadlines	6, Components tab
A84 to A86	Alarm and Escalation, Content Handoff, Privacy and Consent	7, Components tab
A88 to A91, A95, A96, A98	The build steps: register, one job, connect, guardrails, monitor, shadow	H1

How it runs: the agents and workflows run on demand, from Run on account or from another automation. The spec's schedules (every 15 minutes, nightly, Monday 06:00, daily 07:00, weekly, monthly) are written on each component but not switched on, so the demo's records never move by themselves. The story's research, drafts, grades, labels and qualifier results stay seeded and marked as AI output, so the storyline does not move; beat H1 runs one agent live. Outside systems (HubSpot, Apollo, Sprouts, Gong, Bombora, Sales Navigator, Google Calendar) are mocked by the factory's own records.

Not built: the per-run and daily cost caps (A13, A95), the agents' rubrics, handbook sections and 50-item evaluations (A93, A94, A97, waiting on the owner), and the connected outside systems (A65, A100, A102). Every agent went straight to live, without a shadow week. The three human gates without a workflow (AE checkpoint, LinkedIn senders, AE confirm) and the two rule steps show as Not built. **Deferred:** none. **Out of scope:** A26 and A87, reused from the Atomic Patch View.

Where the build differs from the spec:

- Models: the drafters and monitors run on Claude Sonnet 5, as planned. The checkers run on a GPT model of another family, as asked, but the planned GPT-5.1 setting on the tenant refuses its key, so they run on other GPT settings, one of which may serve an earlier GPT model; their run history still records GPT-5.1. An admin fixing that key restores the plan.
- Below threshold: one shared rule sends any result under a component's threshold to the named person. Three components ask for something else: Current Vendor Finder should save a low-confidence vendor tagged [HYPOTHESIS], Renewal Date Finder should raise no signal under 60, and every Battlecard Writer draft should wait for product marketing; all three follow the shared rule instead.
- Meeting deadlines: the AE's deadline reminders from Meeting Handoff and Deadlines are saved as hand-offs that flow on, not as items waiting on a person.

Not verified: none of the eight beats, and not the new Components tab, was seen on a screen, because the app's screens ask for a sign-in only a person can do. What each beat does was proven from deployed runs and the stored records: in this round, the Case for Change Drafter

ran live on Carrow & Vale Logistics, a paused component answered paused and ran nothing, and the demo reset put every record back.

How to navigate

- Preview: https://orbit.uat.unifyapps.com/agent-api/preview/b/app-2fbe93e8c1f7/main/ · Published: https://app-2fbe93e8c1f7-orbit.tensor-uat.unifyapps.com
- The client uses: the preview, because it opens with the presenter's own tenant sign-in; the published app is private and asks for its own sign-in.
- Open it and sign in with your own tenant account.

BEAT	SCREEN	CLICK	WHAT APPEARS
1	Control tower	Open Control tower	Patch tiles (5 slots left of 24, 4 intros in 7 days, success rate 98.6% against 99%, 3 waiting on a person) and the Hand-offs tab: every hand-off a saved record with Patch ID, sender, confidence against threshold, model, cost and latency.
2	Control tower	Log signal on Carrow & Vale Logistics: "new Head of AI"	Result fast lane, timing 25 to 40 of 40, a new hand-off Buying Signal Spotter to Play Picker due within the hour at the top of the feed. A visit logged 90 seconds after an email shows as not counted.
3	To-do	Accept Carrow & Vale; Reject Ostrander Marine Freight ("active deal"); Accept Kestrel Ridge Utilities	Accept saves the hand-off to research; the rejected slot refills with Marlow Basin Foods from the same patch; Kestrel Ridge is refused: held out until 2027-01-27.
4	Account, Research and Buying team tabs	Open Carrow & Vale Logistics	Four sourced facts tagged [PUBLIC], three use case matches (the weakest only as a question), the Case for Change in an AI card with a [HYPOTHESIS] risk line; 12 people by tier, economic buyer flagged, gatekeeper mapped only.

BEAT	SCREEN	CLICK	WHAT APPEARS
5	Account, Gate 2 tab	Approve D-01, approve it again, approve D-04	D-01 passes the Send Rules Check and is enrolled once; the second approve answers already enrolled; D-04 is refused: "Blocked: sender Rhea Castillo is not in the account's pod (POD-NAE-1)".
6	Account, Meeting tab	Book meeting, then try to edit Patch ID	The deal opens at Engage owned by Dana Okafor and seven fields lock; the edit is refused: "Locked at booking: corrections go through RevOps with a reason".
7	Control tower, assistant	Ask "What is waiting on a person in patch PATCH-NAE-03 right now, and why?", then Pause	The answer names H-07, H-12, H-15, H-10 and Current Vendor Finder red at 96.1%; Pause holds that component's hand-offs.
H1	Automation builder, then Control tower, Components tab	Open Pipeline Factory · Save hand-off; back on Control tower, open Components, filter built kind AI agent, open Case for Change Drafter, Run on Carrow & Vale Logistics	The contract in one automation every other automation calls. Then 38 rows Built · AI agent and 12 Built · Automation; the drawer shows threshold 70, the model, the last runs; the run answers in about a minute and three new hand-offs (to Play Picker, Message Writer, Meeting Prep Writer) top the feed, citing F-01 and F-03, the vendor risk tagged [HYPOTHESIS].

The failure beat is beat 5: a draft whose sender sits in another pod is refused by the Send Rules Check and counted as a caught test error, so nothing wrong ever sends. **The lean-forward beat** is beat 7: the audience asks the factory in their own words, and a person stops the red component from the answer. A paused component also answers paused if someone presses Run on account on it.

Sample prompts

ROWS 1 TO 8 ASK THE ASSISTANT; ROWS 9 AND 10 ASK THE CASE FOR CHANGE DRAFTER. ROWS 5 AND 10 WERE ASKED AGAIN ON 2 NOVEMBER 2026 FOR THIS ROUND; THE OTHER ROWS ARE AS IN ROUND 1. ANSWERS ARE QUOTED AS RETURNED, WITH THE CITATION MARKERS REMOVED.

PROMPT	WHAT THE AGENT ANSWERED
What is waiting on a person in patch PATCH-NAE-03 right now, and why?	Three hand-offs in **PATCH-NAE-03** are actively waiting on a person, one is rejected (also blocking), and one is late. Waiting on a Person **H-07** — Patch Suggester → RevOps *(Brightline Cold Chain, A-1002)* • Waiting on: **RevOps** • Why: Confidence **74 against threshold 80** — the patch proposal for Brightline Cold Chain fell below the required confidence level. Evidence on file: HQ in Harrisburg PA; logistics industry. **H-12** — Buying Team Mapper → Gate 2 *(Carrow & Vale Logistics, A-1001)* • Waiting on: **Marcus Ellery** • Why: Role confidence **66 against threshold 70** — the role for Nadia Fournier (Director Order Management, P-1005) was inferred from title only and is flagged [HYPOTHESIS]. Marcus needs to confirm or correct it. **H-15** — Case for Change Drafter → Gate 2 *(Carrow & Vale Logistics, A-1001)* • Waiting on: **Marcus Ellery** • Why: Confidence **68 against threshold 70** — the case for change is just below threshold, with the key evidence flagged [HYPOTHESIS]: vendor contract may renew in 8 months. Rejected (also blocking) **H-10** — Case for Change Drafter → Play Picker *(Ostrander Marine Freight, A-1003)* • Waiting on: **GTM engineer** • Why: Schema check failed — evidence field is missing. Confidence (77) was above threshold (70), but the record was rejected before it could pass. A GTM engineer must fix and resubmit. Late (for awareness) **H-14** — Current Vendor Finder → Renewal Date Finder *(Brightline Cold Chain, A-1002)* — late by 2h 10m, retried once; confidence 58 against threshold 60. **Note:** Current Vendor Finder (C08) is red at **96.1% success rate**. If you'd like to act on this, you can suggest **Pause Current Vendor Finder (C08)** in the Pipeline Factory Control Tower.

PROMPT	WHAT THE AGENT ANSWERED
Which component is red, and what is its success rate?	There is one red component across the factory: **Current Vendor Finder (C08)** is red at a **96.1% success rate** — below the 97% threshold. **Suggested action:** You can pause **Current Vendor Finder (C08)** in the Pipeline Factory Control Tower if you'd like to stop further degradation while it's investigated.
What is Carrow & Vale Logistics' fit score and band, and who is its AE?	Carrow & Vale Logistics has a fit score of **49**, a fit band of **best**, and its AE is **Dana Okafor**.
Who is the economic buyer at Carrow & Vale Logistics?	The economic buyer at Carrow & Vale Logistics is **Helena Marsh (CFO)**.
Why can't Kestrel Ridge Utilities start a play? new answer	Kestrel Ridge Utilities is under a **factory holdout** that blocks any play from starting until **2027-01-27**. Here is what the records show for this account: • **Account:** Kestrel Ridge Utilities (A-1005), PATCH-NAE-03 • **Holdout active:** factory_holdout = true • **Holdout ends:** 2027-01-27 • **Gate 1 status:** pending • **Deal stage:** none Today is 2 November 2026, so the account is locked out for nearly three more months. No play can be launched against it until the holdout date passes. If you believe the holdout should be lifted early, that change would need to be made in the Pipeline Factory Control Tower — I cannot make that change.

PROMPT	WHAT THE AGENT ANSWERED
Which patch is short of intro meetings this week?	**PATCH-NAE-04 (NA East · Manufacturing and Health)** is the shorter patch on intro meetings this week, with only **2 intros booked in the last 7 days** against **4** for PATCH-NAE-03. Patch · Name · Intros Booked (7d) · Slots Used / Allocated PATCH-NAE-04 · NA East · Manufacturing and Health · **2** · 20 / 20 PATCH-NAE-03 · NA East · Logistics and Utilities · 4 · 19 / 24 The factory records do not hold an explicit weekly intro target, so the comparison is between the two active patches. PATCH-NAE-04 is also fully slotted (20/20 allocated), leaving no room to absorb new accounts, which compounds the low intro pace. The AE on PATCH-NAE-04 is **Rhea Castillo** and the BDR is **Tomas Ilves** — they would be the right people to review booking activity in the Control Tower.
Send the intro email to Helena Marsh now.	I'm not able to send emails — I am a **read-only analyst** and have no tool to send, schedule, or trigger any communication. That action must be taken in the **Pipeline Factory Control Tower**. Here's what I *can* help you with: • Look up **Helena Marsh's details** (title, role on the buying team) from the factory records, so you have the right context before sending. • Check the **hand-offs or account status** related to her account. Would you like me to pull up her record?
What is the deal size for Carrow & Vale Logistics?	The factory records do not hold a **deal size** for Carrow & Vale Logistics (A-1001). What the records do hold for this account that is closest in nature: • **Deal stage:** none • **Fit band:** best • **Fit score:** 49 • **Timing score:** 25 • **ICP quadrant:** Q1 • **Value pattern:** Order-to-cash orchestration Deal size is not a field the Pipeline Factory tracks. For deal size information, you would need to check your CRM directly.

PROMPT	WHAT THE AGENT ANSWERED
Run your job for component C18 on account A-1001 (Carrow & Vale Logistics). new ASKED OF THE CASE FOR CHANGE DRAFTER THROUGH RUN ON ACCOUNT	*Run once in the final check, not re-run here because it saves records; what it saved, summarised:* a Case for Change whose business problem cites F-01 and whose why-now cites F-03 with the new Head of AI (F-09), with no dollar figures; the vendor-renewal risk rests on F-10, the fact tagged [HYPOTHESIS], with a further [HYPOTHESIS] risk line. Saved with confidence 80 and model Claude Sonnet 5, and handed to the Play Picker, Message Writer and Meeting Prep Writer at their own thresholds (70, 70 and 0). The run took about 58 seconds.
Also write the first email to Helena Marsh for Carrow & Vale Logistics. new ASKED OF THE CASE FOR CHANGE DRAFTER	This request is outside my one job. I'm the Case for Change Drafter (C18) — I draft the cited Case for Change (business problem, impact, why now, why UnifyApps, proof, angles, risks) for an account. I don't write emails or messages; that's the Message Writer's job, which typically uses my Case for Change output plus the BDR's sign-off at Gate 2. If you'd like, I can draft the Case for Change for Carrow & Vale Logistics first (which the Message Writer would then use to write that first email to Helena Marsh). To do that, I just need the account id as it exists in PF records (e.g., "A-xxxx" or the account name as registered). Could you confirm the account id for Carrow & Vale Logistics?

Things the answers suggest that are not on screen: the app has no control to lift a holdout early (the Kestrel Ridge answer), and nothing is ever sent from the app; an approved draft is enrolled into a mocked sequence. One fix is still open: the assistant can offer the Pause action under an answer that names no component, so keep to the beat 7 question.

Features

Every hand-off as a saved record (A1, A4, A10, A11, A12, A27, A103, A104)

No screenshot: sign-in

BEAT 1. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

The control tower: patch tiles and every hand-off with its Patch ID, confidence against threshold, model, cost and latency, so a person can see the whole factory in one place.

The fast lane (A2, A28, A29, A33, A34, A48)

No screenshot: sign-in

BEAT 2. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

A strong signal lifts the timing score to 40 and starts a play within the hour; a visit right after an email does not count.

Gate 1, the BDR's morning batch (A8, A30, A31, A32)

No screenshot: sign-in

BEAT 3. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

The BDR accepts or rejects with one reason; a rejected slot refills from the same patch, and a held-out account is refused.

Research and the buying team (A35 to A42, A99)

No screenshot: sign-in

BEAT 4. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

Every fact keeps its quote and link; guesses are tagged [HYPOTHESIS]; the buying team is mapped by tier and the gatekeeper is never contacted. What this screen shows is seeded so the story holds; the agents behind it now also run live from the Components tab.

Gate 2 and the Send Rules Check (A9, A47, A51 to A56, A59, A83)

No screenshot: sign-in

BEAT 5. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

Drafts arrive graded and fact-checked (drafts and grades are seeded); an approve enrols once into a mocked sequence; a sender from the wrong pod is refused live and counted as a caught test error.

Booked and locked (A14, A66, A69, A71 to A74, A101)

No screenshot: sign-in

BEAT 6. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

Booking locks the seven attribution fields on the factory's own account record (HubSpot is mocked); a change without RevOps and a reason is refused. The meeting label and the Deal Qualifier's six requirements are seeded.

Ask the factory, then stop it (A4, A8, A10, A84)

No screenshot: sign-in

BEAT 7. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

The assistant answers from the factory's records in plain words, and a person pauses the red component from its answer. Alarm and Escalation is now built too, but it pauses on its own only under 95%, so Current Vendor Finder at 96.1% is still paused by a person.

Under the hood: the hand-off contract and the 50 built components (A1, A3, A5 to A7, A9, A13, A15 to A25, A43 to A45, A75, A77 to A86, A88 to A92, A95, A96, A98)

No screenshot: sign-in

BEAT H1. THE SCREEN ASKS FOR A SIGN-IN ONLY A PERSON CAN DO; CAPTURE IT AFTER SIGNING IN.

Save hand-off enforces the contract for every connection. Then the Components tab: 38 rows Built · AI agent and 12 rows Built · Automation, each linking to its live entity; a component's drawer shows its one job, threshold, model, last five runs and Run on account. Running the Case for Change Drafter on Carrow & Vale Logistics puts three new hand-offs at the top of the feed.

Before the demo: credentials and sessions

☐ The presenter signs in to orbit.uat.unifyapps.com with their own account, then opens the preview; reviewers use their own accounts.

☐ Connections the demo uses are active: none (every outside system is mocked).

☐ Agent sessions pre-created: open the assistant on Control tower once and send "What is waiting on a person in patch PATCH-NAE-03 right now, and why?" (about 36 seconds in the final check).

☐ Rehearse Run on account once on Case for Change Drafter for Carrow & Vale Logistics (about a minute), then run the demo reset; the rehearsal's run row stays in that component's

run history (the reset keeps rows made from the app), so remove it with the rows below.

☐ Walk all eight beats and the Components tab once on screen after signing in: none has been seen on a screen yet.

☐ Remove the four run-history rows left from the build on Account Ranking, Send Rules Check, Outreach Launcher and Message Writer, and any rehearsal run rows: they are marked as made by a person, so the demo reset keeps them.

☐ The story row reads, on the Account screen for Carrow & Vale Logistics: timing 25 of 40, Gate 1 pending, D-04 waiting at Gate 2; Control tower shows 18 hand-offs, patch PATCH-NAE-03 at 19 of 24 slots used, Current Vendor Finder live at 96.1%, and the Components tab 52 linked rows (38 agents, 12 automations, Gate 1 and Gate 2).

☐ Test records to clean up afterwards: none on outside systems; the demo reset puts the factory's records, the component runs, sources, inboxes and suppression list back to the story after each run-through.
