Requirements · Noventiq

Client Noventiq · use case Noventiq · version 1 · round 2 · POC POC-noventiq-noventiq-20261026 · harvested 2026-10-30 · POC lead Gourav Mahunta · manager Mrinal Dixit

1. Summary

Use case	A common data layer over Noventiq's CRMs, ERPs, payroll and time tools that answers business questions as dashboards and a digital assistant: account view, pipeline, gross profit, with utilisation, booking forecast and vendor rebates also listed. Round 2 adds cross-sell/up-sell opportunities per account turned into traceable action plans, synthetic source systems, and the back-end logic (account linking, agent context, citations, sync, error trace-back). Demo date: 10 November.
Why round 2	The manager requested changes on G1 (psl_feedback FB-1793291553836-1, Mrinal Dixit, 2026-10-29). The POC lead's "rebuild this" (FB-1793345185239-1) and "build" (FB-1793349011236-1) ask for the rework and carry no new content, so they add no asks.
Asks added this round	11: 11 P0 · 0 P1 · 0 out of scope (A49 to A59). All asks now: 59 (16 P0 · 36 P1 · 7 out of scope).
Sources read	#noventiq_internal since 2026-10-26 13:19 UTC (2 messages) and the G1 thread (all replies); #p_noventiq since then (4 messages, no asks); psl_document rows of this POC (1, the round-1 requirements doc, no input files); open psl_feedback rows of this POC (3); Gmail (no thread names Noventiq, Embee or the client's domain since 2026-10-26); public sources on Noventiq's business model (§ Context, for A49)
Not read	Noventiq Use Case.mov (recording, Google Drive link): not read, Google Drive not connected in this session Google Calendar: not read, the connector needs the person to sign in again

Size hint

Kind	Count	What, and the asks behind it
Objects	11	Customer, one key across the source CRMs (A1, A23, A35, A55) Opportunity and pipeline stage, mapped to one group set (A2, A24, A29) Service catalogue and local-code mapping (A2, A25) Gross-profit line by quarter, service line, country, customer (A3, A9, A26) Data exception with owner, traced to its source (A15, A16, A28, A36, A59) Vendor rebate (A13) Project and timesheet (utilisation) (A11, A27) Synthetic source-system records, one store per system (A51) Cross-sell/up-sell opportunity per account, with its evidence (A53) Action plan with its change history (A54) Citation: the source rows behind each financial figure (A57)

Kind	Count	What, and the asks behind it
Automations	5	Link customers across sources to one account key (A1, A23, A35, A55) Compute gross profit and reconcile it to the accounts, with a trace to source (A3, A4, A17, A34, A57) Detect exceptions, trace each to its connector and record, and route it to its owner (A15, A16, A28, A36, A59) Sync source changes into the data layer (A58) Accelerate, roll back or edit an action plan (A54)
AI agents	2	Digital assistant answering over the account, pipeline and gross-profit data, with citations (A14, A31, A40, A56, A57) Cross-sell/up-sell suggester per account (A53)

Context: Noventiq's business model (for A49)

Research context from public sources and the client's deck, not asks. The G2 plan turns it into the persona and the AI features.

Topic	What the sources say
What Noventiq is	A global IT solutions and services provider (formerly Softline): software and hardware provisioning, public and private cloud, and associated services; one of Microsoft's leading partners for software licensing and cloud. Focused on emerging markets in Eastern Europe, the Americas and Asia. Revenue about USD 1.6 billion (FY23, per Wikipedia, not checked against a filing).
How it earns	Resale margin on software licences and cloud subscriptions, vendor funding and rebates (A13: "key income source"), and services (integration, cybersecurity, ERP, HR systems). Embee, its Indian business, was about 60% cloud revenue when acquired (2021 press release).
How it grew	By acquisition: Embee (India, majority 2021, full 2023), Squalio (Europe) and others. Each kept its own CRM, ERP, payroll and time tools (deck p.9), which is why customers, stages and services do not line up (A29, A23 to A25).
Likely central persona	Finance in the group and country entities, who must sign off gross profit, rebates and reconciliation and do not trust AI without citations (A57); with country sales and account leads, who need one account view and the next best offer per customer (A1, A53). Open question 2 confirms.
Pain points the sources name	Three CRMs with different stage meanings (A29); no common customer key (A23); local service codes (A25); gross profit not tying to the accounts (A34); rebates booked late (A15); missing timesheets hiding overruns (A11, A15); people cost that must stay private (A38, A39); exceptions that only the partner can fix today (A36).
Sources	Wikipedia: Noventiq · Noventiq news: Embee stake · Noventiq news: Squalio · SEC 424B3 (2024) · the client's deck pages read in round 1

How the round-2 feedback is carried forward

Each part of the manager's feedback is an ask below; this says where it is answered. Harvest records it; the G2 plan designs it.

Id	Feedback part	Where it is answered
A49	Research and ideation on the actual business model of Noventiq should be added to the overall context to understand the central user-persona, their pain points a bit more to have a better idea on what AI features need to be created finally.	§ Context above; persona in open question 2; AI features in the G2 plan
A50	What multiple countries would be incuded in the anlaysis	Open question 3 (recommended: India for Embee and NQ AI, plus the easy-landscape country)
A51	Creation of the synthetic systems that we are supposed to connect with for the data on which the business intelligence is supposed to be generated.	Open question 4; the G2 plan lists each synthetic system, its records and fields
A52	Answer to the six practical questions that drive cost and feasibility needs to be explicitly answered.	Open question 7; the six questions are listed in the next table
A53	In addition to current revenue health the solution should also offer cross-sell/up-sell opportunities at an account level with evidence collected from data across all of these accounts	New business view: opportunities per account with their evidence (open question 5)
A54	These suggestions should translate to traceable action plans that can be acclelerated/rolled back or edited at any point of time.	Action plans with history (open question 6)
A55	Central logic of linking disjointed data across different sources into a singular source of truth at an account level across multiple connector sources.	G2 plan: account key and matching rules across every source
A56	How that logic and context will flow inside the agent.	G2 plan: what the assistant reads, in what order, and how it cites
A57	Logic for returning evidence on each and everty financial calculation made...finance people do not trust AI without citations.	G2 plan: a citation on every financial figure, down to the source rows
A58	Data Sync strategies, how exactly is data updated across any of these systems refelcted in the final response.	G2 plan: sync method per source (copy for month-end figures, live read for deal status, A37) and how a change reaches an answer
A59	Logic for tracing back the errors detected in any connector/any data at any point of time to it's source.	G2 plan: each exception carries its connector, source record and sync run (open question 11)

The six practical questions (deck p.10, for A52)

No.	Question on the client's slide	What the plan must show
1	Can we get the data?	Each synthetic source system connected, and what was pulled from each (A7, A51)
2	Can we make it consistent?	Customers, stages and services mapped to one key and catalogue (A23 to A25, A35, A55)
3	Can Finance trust it?	Gross profit tied to the accounts, every figure cited to its source rows (A4, A34, A57)
4	Can we keep it running?	Sync per source, exceptions traced and fixed by Noventiq's own people (A36, A58, A59)
5	Copy or read live?	Copy for month-end gross profit, live read for a deal's current status (A37, A58)
6	What does scaling cost?	Effort per system and country, extrapolated to 20+ countries (A43, A44: out of scope today; open question 12)

2. Asks

Only the asks added this round. A1 to A48 stand as in round 1.

P1

None added this round.

3. Open questions

For the POC lead: answer by number in the G1 thread. The recommended option is listed first. Round 1’s questions that are still open are carried here; round 1’s data question is settled by A51 (synthetic systems) and its entities question became question 3.

What nobody has said yet

No.	Question	Options
1	Who presents on 10 November, and to whom (roles, slot length)? No source names the audience.	**(a) recommended:** A UnifyApps presenter in the seat of Noventiq's group finance team, to Noventiq's group CFO office and the country leads of the three POC entities, 20 minutes (b) The profile default: a senior operations leader, 20 minutes, in person, projector
2	Which persona are the screens for (A49 asks for the central user persona)? No source names one.	**(a) recommended:** Primary: the group or country finance controller who must trust gross profit, rebates and reconciliation (A3, A4, A13, A17, A57); secondary: the country sales or account lead who acts on pipeline and cross-sell/up-sell action plans (A2, A10, A53, A54) (b) The profile default: the client's team lead

Other questions

No.	Question	Options
3	Which countries are in the analysis (A50, A6, A41)? The deck names three landscapes; A39 says two POC entities are in India; no source names the third country.	**(a) recommended:** India for Embee (typical landscape) and NQ AI (hard landscape), plus the country of the NetSuite + Creatio entity (easy landscape), which the lead names; shown as a placeholder country until named (b) Three countries the lead names now
4	How are the synthetic source systems built (A51; the demo data is synthetic, which settles round 1's real-versus-fictional question)?	**(a) recommended:** One synthetic store per source system, shaped like its real records and with its own ids, codes and last-updated times (Creatio, Dynamics 365, Black and White CRMs, NetSuite, SAP B1 and Tally ERPs, payroll, Zoho Projects and Azure DevOps time), so linking, sync and trace-back to source can be shown (b) Mock APIs behind custom connectors that the data layer calls (c) Trial instances of the real products
5	Which business views does the 10 November demo show (A6 says 3 business views; A9 to A13 list five; A53 adds cross-sell/up-sell)?	**(a) recommended:** Account view across three CRMs with cross-sell/up-sell opportunities and action plans, pipeline by stage, service and country, gross profit for the last four quarters (A1 to A3, A53, A54) (b) Revenue watchtower, sales watchtower and vendor funding and rebate tracking (A9, A10, A13), with cross-sell inside the account view (c) All five business questions plus cross-sell, the extra ones at lower depth

No.	Question	Options
6	Where do the cross-sell/up-sell action plans live (A54: accelerated, rolled back or edited at any time)?	**(a) recommended:** In the demo app, each plan a record with steps, owner, due dates, the evidence it rests on and a full change history, so accelerate, roll back and edit are each a logged version (b) Also written back to the synthetic CRM as tasks or opportunities
7	Where are the six practical questions (deck p.10: get the data, make it consistent, can Finance trust it, keep it running, copy or read live, scaling cost) answered explicitly (A52)?	**(a) recommended:** In the G2 plan, one row per question with the demo screen or mechanism that proves it, and a "How it works" page in the demo app (b) In the G2 plan only
8	The CRM is written "Cresio" in the internal note (A8) and "Creatio" on the client's slide. Which name is used on screen?	**(a) recommended:** Creatio (b) Another name the lead gives
9	The recording "Noventiq Use Case.mov" is still not read (it is a Google Drive link and Google Drive is not connected in this session). How to proceed?	**(a) recommended:** Re-upload it to #noventiq_internal or connect Google Drive, so the next round reads it; go on meanwhile (b) Proceed without it
10	Ashish Jha offered a short call with Mrinal Dixit to give the use case, and the Cognizant business model as a reference (#p_noventiq, 2026-10-26); no source read says it happened. Wait for it?	**(a) recommended:** Proceed to G2 now; fold what the call gives into a feedback round (b) Hold G1 until the call has happened
11	The deck's "test the difficult cases" (A15, A16, A36) and the error trace-back ask (A59): make an exceptions worklist part of the demo story?	**(a) recommended:** Yes: unmatched customer, rebate booked a quarter late and team with missing timesheets, each traced to its source system and record, with a named owner who fixes it, as the story row (b) Keep as P1, shown only if time allows
12	Deliverables 1, 3 and 5 and the four-month programme (A42 to A48) are consulting deliverables, not the demo app, and stay out of scope (A52's six questions are answered in this use case). Agree?	**(a) recommended:** Yes, keep them out of scope (b) Promote some (reply promote A<n>), e.g. a cost-to-scale view

No.	Question	Options
13	The UI reference "insurance claim AI accelerator" (A14) was not shared in any source read. Which shape does the demo follow?	**(a) recommended:** Dashboards plus a digital assistant over the same data, every figure with its citation (A14, A31, A57) (b) The lead shares the accelerator so the plan can follow it
14	Every ask's proposed owner is the POC lead; Amogh Gupta tagged Mrinal Dixit and Gourav Mahunta with "need to pick this". Who owns the asks?	**(a) recommended:** Gourav Mahunta owns all asks (b) Split between Gourav Mahunta and Mrinal Dixit (the lead names which)

4. Other use cases mentioned

Unchanged from round 1. Reply “promote A<n>” in the G1 thread to bring one into this use case.
