UnifyApps

Every agent hands off through the context graph, never directly

The storyline title, in the spec's own words (A103). One account, Carrow & Vale Logistics, moves from a buying signal to a booked meeting, and every hand-off is a saved record a person can see, check and stop.

STORY ROW

PF Account **A-1001 Carrow & Vale Logistics** · patch PATCH-NAE-03 (NA East · Logistics and Utilities) · pod POD-NAE-1 · AE Dana Okafor (backup Luis Brennan) · BDR of record Marcus Ellery · fit 49 of 60, best fit · timing 25 of 40, then 40 after beat 2 · rank 1 · play PLAY-SIG-NEWLEADER · economic buyer Helena Marsh (CFO) · champion Arjun Mehta · new Head of AI Colette Baines · drafts D-01 to D-06 · 19 of 24 slots used. All fictional.

#	BEAT	THE PRESENTER DOES, THE SCREEN SHOWS	ASKS	MODE	ROUTE
1	**The control tower**	The presenter opens Control tower: patch tiles (5 slots left of 24, 4 intros in 7 days, success rate 98.6% against 99%, 3 waiting on a person) and the Hand-offs tab, every hand-off a saved record with Patch ID, sender, confidence against threshold, model, cost and latency.	A1 A4 A10 A11 A12 A27 A103 A104	live	/TOWER
2	**The fast lane**	Log signal on Carrow & Vale Logistics: "new Head of AI". Result fast lane, timing 25 to 40 of 40, a new hand-off Buying Signal Spotter to Play Picker due within the hour. A visit 90 seconds after an email shows as not counted.	A2 A28 A29 A33 A34 A48	live deterministic	/TOWER
3	**Gate 1**	To-do as the pod BDR: the 07:00 batch with fit band, timing, top 3 signals, Patch ID, AE, last touch, slots left. Accept Carrow & Vale; reject Ostrander Marine Freight ("active deal") and the slot refills from the same patch; Kestrel Ridge Utilities refused: held out until 2027-01-27.	A8 A30 A31 A32	live	/TODO
4	**Research and the buying team**	The account: four sourced facts with quote, page and link [PUBLIC]; three use case matches by UC-ID, the weakest only as a question; the Case for Change in an AI Insight card with a [HYPOTHESIS] risk line; 12 people by tier, the economic buyer flagged, the gatekeeper mapped and never contacted.	A35 A36 A37 A38 A39 A40 A41 A42 A99	seeded	/ACCOUNTS/A-1001
5	**Gate 2** FAILURE BEAT	Approve D-01 (grade 86, fact check passed): Send Rules Check passes, enrolled once; approve again: already enrolled. Approve D-04: refused "sender Rhea Castillo is not in the account's pod (POD-NAE-1)", counted as a caught planted error.	A9 A47 A51 A52 A53 A54 A55 A56 A59 A83	live seeded	/ACCOUNTS/A-1001
6	**Booked and locked**	Book meeting: the deal opens at Engage owned by the patch AE; seven fields lock. Editing Patch ID is refused: "Locked at booking: corrections go through RevOps with a reason". The Deal Qualifier's six requirements and the AE deadlines below.	A14 A66 A69 A71 A72 A73 A74 A101	live seeded	/ACCOUNTS/A-1001

#	BEAT	THE PRESENTER DOES, THE SCREEN SHOWS	ASKS	MODE	ROUTE
7	**Lean-forward: ask the factory, then stop it**	The assistant is asked "What is waiting on a person in patch PATCH-NAE-03 right now, and why?" It names H-07 (RevOps), H-12 and H-15 (the BDR) against their thresholds, H-10 rejected on its schema, and Current Vendor Finder red at 96.1%. Its one action, Pause Current Vendor Finder, holds that component's hand-offs.	A4 A8 A10 A84	live	/TOWER
H1	**Under the hood**	Open Pipeline Factory · Save hand-off in the automation builder: register check, one writer per field, the schema check that rejected H-10, the confidence gate, the idempotency key account + person + play.	A5 A6 A7 A9 A92	live	BUILDER

Alternatives considered for the lean-forward beat

B · the learning loop: a Scoring Tuner weight proposal passing the Quality Grader and the Friday review (A3, A75). Weaker: seeded end to end.
C · the stop alone: a person pauses a component from its drawer (A4). Weaker without the question that finds it.
Chosen: the audience asks the factory in their own words, and a person stops it from the answer.

2 · What gets built

KIND	NAME	WHAT IT IS FOR	BEATS
Object	**PF Patch**	Slots, pace and success rate per patch	1, 3
Object	**PF Account**	Fit, timing, Gate 1 state, the fields that lock at booking	1–7
Object	**PF Person**	The buying committee by tier and role	4, 5
Object	**PF Signal**	Signals with weight, confidence, counted or not	2
Object	**PF Fact**	Sourced facts, use case matches, Case for Change lines	4

KIND	NAME	WHAT IT IS FOR	BEATS
Object	**PF Draft**	Drafts at Gate 2 with grade, fact check, rules result	5
Object	**PF Hand-off**	Every hand-off as a saved, schema-checked, confidence-scored record	1, 2, 3, 7, H1
Object	**PF Component**	The registry: 38 agents, 12 workflows, 5 human gates, 2 rule steps	1, 7
Object	**PF Seed snapshot**	The seeded values the reset restores (housekeeping)	none
Automation	**Pipeline Factory · Save hand-off**	The hand-off contract, enforced in code	H1 (called by every other)
Automation	**Pipeline Factory · Log signal**	Checked-visit rule, weights, timing, fast lane	2
Automation	**Pipeline Factory · Decide Gate 1**	Accept or reject, hard blocks, same-patch refill	3
Automation	**Pipeline Factory · Clear Gate 2**	Send Rules Check, one enrolment per person and play	5
Automation	**Pipeline Factory · Book meeting**	Books the deal, locks seven fields, RevOps-only corrections	6
Automation	**Pipeline Factory · Pause component**	A person stops a component; its hand-offs hold	7
Automation	**Pipeline Factory · Read factory records**	The analyst's read-only tool	7
Automation	**Pipeline Factory · Ask the analyst**	Calls the analyst for the app	7
Automation	**Pipeline Factory · Reset demo**	Clears test rows, restores seed rows (housekeeping)	none
AI agent	**Pipeline Factory Analyst**	Read-only assistant over the factory records	7
Code app	**UnifyApps Pipeline Factory Control Tower**	Control tower, To-do, Account; PRIVATE	1–7

Size against the reference

	THIS PLAN	REFERENCE	FLAG
Pages	3	4	
Objects	9 (incl. seed snapshot)	3	over
Automations	9 (incl. Reset demo)	3	over
AI agents	1	1	
Tasks in the graph	about 50		
Nebula plans (one per 10 tasks)	5		

Over the reference is a flag, never a cut. 3-build runs the graph as five Nebula plans of about ten tasks.

Screens

SCREEN	BEATS	REGIONS, AS KIT PARTS
Control tower /tower	1, 2, 7, H1	tiles · tabs Hand-offs / Components · toolbar and table · record and component drawers · activity feed · Log signal modal · agent drawer with an AI Insight card
To-do /todo	3	toolbar and Gate 1 table with signal chips · Accept / Reject with a reasons menu · hard-block tag and note · Waiting on you feed
Account /accounts/:accountId	4, 5, 6	breadcrumb · account head with locked fields · tabs Research / Buying team / Gate 2 / Meeting · facts table · Case for Change card · person cards by tier · drafts table · stages · six requirements · deadlines agenda

3 · Data

Source: assumed, shaped like HubSpot (accounts, contacts, deals) and the factory's context graph. The component registry is given: the spec's sub-workflow tables, written to STUDIO/DATA/COMPONENTS.CSV (57 rows, 16 columns, no personal field) with seeded run statistics.

Masking: none needed: every company, person and link is invented (links under carrowvale.example). Every row carries ORIGIN (seed, test, user); Reset demo clears test rows and restores seed rows.

ENTITY	ROWS	HOW THEY GET IN
PF Patch	2	named rows
PF Account	15	named rows; story row A-1001 Carrow & Vale Logistics
PF Person	13	named rows: A-1001's committee and gatekeeper
PF Signal	9	named rows
PF Fact	10	named rows

ENTITY	ROWS	HOW THEY GET IN
PF Draft	6	named rows; D-04 the planted wrong-pod sender
PF Hand-off	18	named rows; 3 waiting on a person, 1 rejected, 2 late
PF Component	57	file studio/data/components.csv (from the spec's tables)
PF Seed snapshot	one per seeded row	written by the seed task

Expected answers (the analyst)

QUESTION	EXPECTED ANSWER	KIND
What is waiting on a person in patch PATCH-NAE-03 right now, and why?	Three hand-offs wait on a person: H-07 (Patch Suggester for Brightline Cold Chain, confidence 74 under 80) waits on RevOps; H-12 (Buying Team Mapper, role of Nadia Fournier, confidence 66 under 70) and H-15 (Case for Change Drafter, the vendor-renewal risk line, confidence 68 under 70) wait on Marcus Ellery at Gate 2. H-10 for Ostrander Marine Freight was rejected (schema check failed: evidence missing) and waits on the GTM engineer.	fact
Which component is red, and what is its success rate?	Current Vendor Finder, at 96.1% (target 99%, red under 97%), with late hand-offs H-14 and H-18.	fact
What is Carrow & Vale Logistics' fit score and band, and who is its AE?	Fit 49 of 60, best fit, in patch PATCH-NAE-03; the AE is Dana Okafor (backup Luis Brennan), BDR of record Marcus Ellery.	fact
Who is the economic buyer at Carrow & Vale Logistics?	Helena Marsh, CFO, Tier 1. Her executive assistant Joan Pruitt is mapped as gatekeeper and never contacted.	fact
Why can't Kestrel Ridge Utilities start a play?	It is held out (factory holdout) until 2027-01-27, a Gate 1 hard block.	fact
Which patch is short of intro meetings this week?	PATCH-NAE-04: 2 intros booked in 7 days, with a 25% pace boost; PATCH-NAE-03 has 4.	fact
Send the intro email to Helena Marsh now.	declines	refusal
What is the deal size for Carrow & Vale Logistics?	says absent	refusal

4 · Intent and coverage

Proposed intent: both. The spec is an engineering build spec read by a senior operations leader: the audience wants the outcome (one account through the factory) and then how the hand-off contract is enforced. One hood beat (H1), after the lean-forward beat.

All 102 open asks are covered: **50** shown by a beat, **46** by a control on a beat screen (mostly the Components tab of the control tower, one row per component), **6** left to an open question. A26 and A87 are out of scope (Atomic Patch View).

5 · Open questions

For the owner. Answer by number in the thread; until then the build proceeds on each assumption.

QUESTION 1

Which intent should the demo take?

recommended both: the outcome first, then one hood beat on the Save hand-off automation

other options use-case: no hood beat, 15 to 20 rows · platform: 2 to 4 hood beats, a one-line description on every node and field

Assumption until answered: The plan is written for both.

QUESTION 2

Which slice is built live, and is that what the client will count as success? (harvest questions 1 and 3)

recommended one account end to end on six live automations and one live AI agent; the 57 components as registry rows with seeded run statistics

other options one sub-workflow in full depth · two or three more of the 38 agents built live (name them)

Assumption until answered: The agents' rubrics (A93), handbook sections (A94) and 50-item evaluations (A97) are not built.

QUESTION 3

The Hand-off register (A5) and the blueprint it cites are not in the shared file. What is the register? (harvest question 4)

recommended the spec's Feeds columns, written into each component's feeds; Save hand-off refuses any pair not in it

other options share the register in the thread before the build starts

Assumption until answered: The plan uses the Feeds columns.

QUESTION 4

Outside systems: Sprouts and Gong have no connection on the tenant; its 9 HubSpot and 2 Apollo connections belong to other people.

recommended mocked by the factory's own records, labelled (mocked) on screen; no external step

other options name one HubSpot connection: booking writes the locked fields to a DEMO-TEST company there as a bonus · a HubSpot sandbox, its credential asked in the session

Assumption until answered: A65, A100 and A102 are shown as rules on the mocked records.

Assumptions the build uses

- Proposed intent both, with one hood beat after the lean-forward beat.
- Live slice: one account's path (sub-workflows 2, 3, 4, 5 and 7); the rest as registry rows.
- Hand-off register: the spec's Feeds columns.
- HubSpot, Apollo, Sprouts, Gong, Bombora, Sales Navigator, Google Calendar mocked; no external step.
- Brand colour #847347, hue 43: the fill of the UnifyApps logo on www.unifyapps.com. The sampler's pick, #007AFF, was a carousel library default. Other candidates: #0F2805 (text green), #5C37EB (violet accent).
- Logo: the site header's Unify-logo.svg, used as published.
- Look: theme light · chrome brand · surface glass · density comfortable · style-set S1.
- The analyst runs on Nebula's recommended model; the spec's two model families show as a column, not two live models.
- Seed rows fictional (invented companies, people and links), dates in the 90 days before the demo.
- Reset demo and the seed snapshot are the one automation and object no beat shows.
- App PRIVATE; publish and deploy without asking (profile).
