Requirements · Pipeline Factory v1

UnifyApps · POC-unifyapps-pipeline-factory-v1-20261031 · version 1, round 1 · harvested 2026-10-31 · POC lead and manager Gourav Mahunta

1. Summary

Item	Value
Use case	Pipeline Factory v1: the GTM pipeline factory of single-job AI agents, deterministic workflows and human gates, connected only through the enterprise context graph
Client	UnifyApps (internal use)
Version · round	1 · 1 (first version: whole channel history read)
Asks added	104: 10 P0, 92 P1, 2 out of scope
Size hint	15 objects · 15 automations · 38 AI agents (tables below)
Open questions	6 (2 on facts nobody has stated yet)

Sources read

Source	What it gave
#pipeline-factory-v1, whole history (6 messages) and its 2 threads	The spec file below; the POC set-up exchange (use case, manager, client, G1 start). No asks in the messages themselves.
Pipeline-Factory-Engineering-Build.docx (Slack upload F0CDQM8HAVC, 400 KB, posted 2026-10-31 by Gourav Mahunta; spec dated Oct 28, 2026, by Hardik)	Read whole on the first attempt: every ask below except two comes from it
image1.png, the diagram inside the spec	Looked at; 2 asks from its written text
Orbit psl_document rows of this POC	None exist
Orbit psl_feedback rows of this POC	None exist
Gmail	Searched for Pipeline Factory and its source blueprint: no threads
POC Studio row	No brief
Profile studio/profiles/unifyapps.md	Audience, presenter, data and connection defaults

Sources not read

Source	Why
Google Calendar	not read: the Calendar connector needs a fresh sign-in on this runner, so client meetings and their dates are unknown
"Pipeline Factory Final Blueprint — Patches and Pods (Oct 28, 2026)"	not read: named as the spec's source, never shared in the channel, Orbit or Gmail
"Hand-off register" the spec refers to	not read: the spec says "below" but the file does not hold it
Call recordings and transcripts	none shared; with Calendar unread, no call can be listed as missing a transcript

Seen in shared media

image1.png (diagram in the spec, one frame): "Every agent hands off through the context graph, never directly". Eight bands top to bottom (1 Patch accounts, 2 Account selection, 3 + 4 Research and buying committee, 5 Outreach drafting, 6 Outreach, 7 Engage, Connect, Commit, 8 Learning and governance) with the records each hands down; a legend tells LLM agents, deterministic workflows, person gates and reused components apart; a dashed fast lane from band 2 to band 5 ("strong signal starts a play within 1 hour"); an orange learning-loop line from band 8 back to bands 1, 2, 5 and 6. Person gates shown: RevOps approves, Gate 1 · pod BDR, AE checkpoint, Gate 2 · pod BDR, LinkedIn senders, BDR or AE sends, AE confirms stage, Friday learning review. Patch Mapper is drawn as reused, not built.

Size hint

Counted from the words by one rule (a noun tracked, listed or kept is an object; a verb that changes state, routes or notifies is an automation; an ask to ask, answer, summarise or suggest is an AI agent). A hint only; 2-plan does the real count.

Object	Asks
Account (company)	A15, A16, A17
Person (buying-committee contact)	A40, A41, A44
Patch	A15, A22, A14
Signal	A28, A29
Play	A48, A76
Touch / draft	A51, A55, A76
Meeting	A69, A71
Deal	A69, A72
To-do item	A8, A32, A46
Hand-off record (output record with evidence)	A7, A11, A92
Fact (sourced, with evidence tag)	A36, A99

Object	Asks
Do-not-contact entry	A45
Battlecard	A25
Registry entry (component, rubric, hand-off)	A5, A89, A93
Alarm	A84

Automation	Asks
Account Ranking (workflow)	A29
Weekly Slot Planner (workflow)	A30
Holdout Picker (workflow)	A31
Contact Finder (workflow)	A44
Do-Not-Contact List (workflow)	A45
Send Rules Check (workflow)	A54
Outreach Launcher (workflow)	A59
Email Domain Swapper (workflow)	A63
Meeting Handoff and Deadlines (workflow)	A69
Alarm and Escalation (workflow)	A84
Content Handoff (workflow)	A85
Privacy and Consent (workflow)	A86
Route a below-threshold record to the named person's to-do list	A8
Reject a record failing its schema and alert the GTM engineer	A7
Retry a late hand-off and count it against the success rate	A10

AI agent	Asks
Duplicate Finder	A16
Parent Company Linker	A17
Headquarters Finder	A18
Headquarters Re-checker (monitor)	A19

Case for Change Drafter	A38
Buying Team Mapper	A41
Person Notes Writer	A42
Intro Finder	A43
Play Picker	A48
Page Builder	A49
Content Picker	A50
Message Writer	A51
Fact Checker (checker, other model family)	A52
Message Grader (checker, other model family)	A53
Call Script Writer	A60
Follow-up Planner	A61
Inbox Health Checker	A62
Reply Sorter (checker)	A67
Reply Writer	A68
Meeting Prep Writer	A70
Meeting Labeler (checker)	A71
Deal Qualifier (checker)	A72
Winning Message Finder	A77
Scoring Tuner	A78
Objection Collector	A79
A/B Tester	A80
Quality Grader (checker)	A81
Agent Monitor	A82
Test Error Planter	A83

Tables in the spec kept as context

These tables are reference data the asks lean on (A48, A57, A100); they are kept whole here rather than split into asks.

Plays the Play Picker chooses from

Signal	Play	Who	Shape	Lead sender
Past champion changes job	Champion Move	Champion, then 2 Tier 1 after reply or 5 days	Personal note + call; 3 touches in 7 days	Patch AE; the AE who knew the champion co-sends the first note
Checked pricing/product visit	Hot Visit	Visitor + Tier 1	Call within 1 business hour, then a topical email (never "I saw you visited")	BDR calls; AE emails
Several people engage within 7 days	Committee Surge	The engaged group	Cold touches pause; one joint note with the page; call the most senior	Patch AE
New CIO/CTO/CDO/CAIO/Head of AI in 90 days	New Leader	Leader + 2 direct reports	Congrats, first-90-days insight, AotP invite; 5 touches in 14 days	Exec sponsor on LinkedIn; BDR email
Warm intro found	Warm Intro	Target via introducer	Intro request; cold touches wait 7 days	Introducer, then patch AE
Vendor renews within 9 months	Displacement	Tier 1 + architects	Switch path from the battlecard + AotP; 8 touches in 21 days	Patch AE
Hiring for AI/automation/integration roles	Build vs Buy	Hiring manager + Tier 2	The role framed as the problem; 6 touches in 14 days	BDR
Earnings names AI, automation, cost cutting	Board Priority	Tier 1 + operations owner	Stated priority matched to a UC-ID; baseline sequence	BDR

Signal	Play	Who	Shape	Lead sender
Event attendance or sign-up	Event Follow-up	Attendee + 2 colleagues	Session-specific insight within 24h; 4 touches in 10 days	BDR
No signal; due in 13-week cycle	Baseline	10 people by tier	8-touch sequence below	BDR

Baseline sequence

Day	Touch	Content
1	LinkedIn connection (Sprouts)	Short note, no pitch
2	Email 1	Their business problem + one question
4	LinkedIn 2	One sourced insight; InMail on day 6 if not accepted
6	Call + voicemail	From the Call Script Writer
8	Email 2	Best asset + the AotP page
11	LinkedIn 3	Event invite or a second asset
15	Email 3	Goodbye
18	LinkedIn 4	Goodbye; skipped if they replied by email

Tools to connect

Tool	Job	Access	Used by
UnifyApps Enterprise Brain: Context Builder, Solution Builder, Governance, Portal	Context graph, every agent and workflow, rubrics, tests, policy register, control towers	Native	Everything
Master registry	Agent / workflow / artifact IDs; reuse check	Read and register	Every build
brain.unifyapps.com	To-do lists, AI Twins, commitments	Write: to-do items, twin content	Every human step
Atomic Patch View	Patch control tower, My 4P, Patch Mapper and other reused agents	Write: factory signals. Read: Patch IDs, readiness	Weekly Slot Planner, Alarm and Escalation
Two LLM families, with web search	One drafts, the other checks	Native	All agents; checkers on the other family

Tool	Job	Access	Used by
HubSpot (Sales + Marketing Hub, Pro or Enterprise)	System of record; web visits and intent (Breeze); events; AotP pages; AE booking links; nurture	Read: companies, contacts, deals, meetings, events, web analytics. Write: contacts, tasks, notes, sequence status, deals at Engage, lists, locked factory fields	Most agents and workflows
Sprouts plugin (internal)	LinkedIn sends from each person's own account; verified emails and phones; hiring and tech signals	Write: LinkedIn queues. Read: contacts, replies, signals. DNC list copied in every 15 min	Contact Finder, Outreach Launcher, LinkedIn senders, Reply Sorter, Buying Signal Spotter
Apollo	Lookalikes, people search, tech data, job changes; email sequences; dialler	Read: people, companies, tech data. Write: sequences, call tasks, inbox limits and pauses	New Account Finder, Buying Team Mapper, Outreach Launcher, Call Script Writer, Reply Sorter
LinkedIn Sales Navigator Advanced (8 seats)	Alerts, job changes, TeamLink	People only; alerts read from a monitored inbox; never scraped	Buying Signal Spotter, Intro Finder
Bombora	Intent surges	Read: weekly feed	Buying Signal Spotter, New Account Finder
Gong	Call recording (with state consent), transcripts	Read: transcripts, attendees. Write: consent settings	Call Script Writer, Meeting Labeler, Deal Qualifier, Objection Collector
SEC EDGAR, investor-relations pages, web search	Filings, earnings, press, HQ evidence	Read	Company Facts Collector, Headquarters Finder, Parent Company Linker
GlockApps, MXToolbox, Google Postmaster Tools	Inbox placement, blacklists, Gmail reputation	Read	Inbox Health Checker
Do-not-call screening service	Federal and state DNC lists	Read	Do-Not-Contact List

Tool	Job	Access	Used by
Google Workspace + Calendar	48 sending inboxes on 12 domains; meeting pick-up; call blocks	Inbox and DNS admin; Gmail for in-thread replies; Calendar read/write	Outreach Launcher, Email Domain Swapper, Reply Writer, Meeting Handoff
Google Drive	Content Factory asset sources; opt-in connection exports	Read	Content Picker, Intro Finder
LinkedIn Campaign Manager	Ad audiences by patch geography	Write, via HubSpot ads sync	Content Handoff
DNS provider	SPF, DKIM, DMARC	Write, by checklist	Email Domain Swapper

2. Asks

P0 (10)

Id	Words, verbatim	Source	Proposed owner
A5	Registered. A hand-off not in the Hand-off register below does not exist.	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A6	One writer per field. Only the component named in the register writes a field; everyone else reads.	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A7	Schema check on save. A record that fails its JSON schema is rejected, the GTM engineer is alerted, and the downstream step waits. Never substitute generic copy.	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A8	Confidence gate. A record below the component's threshold does not flow on; it goes to the named person's to-do list (thresholds are in each sub-workflow table).	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A9	Idempotent. Every save is keyed on account_id + person_id + play_id. Re-running a hand-off never creates a second copy or a second enrolment.	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A10	On time. Each hand-off has a "When". A late one retries, then counts against the component's success rate (target 99%, red under 97%).	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A11	Traced. Every run logs input, output, model, confidence, cost and latency, keyed by patch_id. Failures show in the control towers with their cause.	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A12	Patch-keyed. Every record carries its patch_id and the sender's confidence score.	Pipeline-Factory-Engineering-Build.docx § How the agents connect › Hand-off contract — enforce in code for every connection · 2026-10-31	Gourav Mahunta
A101	Create these HubSpot fields first (workflow-written only): patch_id, pod, owner_ae, backup_ae, ultimate_parent_lock, factory_holdout, factory_holdout_until, bdr_of_record, meeting_type, meeting_source, factory_sourced, factory_influenced, marketing_influenced, value_pattern.	Pipeline-Factory-Engineering-Build.docx § Tools to connect · 2026-10-31	Gourav Mahunta
A102	Do not connect: LinkedIn scrapers or any LinkedIn tool other than the Sprouts plugin (LinkedIn bans third-party automation); mirror profiles; a third outreach tool or second dialler (it would split reply detection and the DNC list).	Pipeline-Factory-Engineering-Build.docx § Tools to connect · 2026-10-31	Gourav Mahunta

P1 (92)

Id	Words, verbatim	Source	Proposed owner
A1	The Pipeline Factory is 38 single-job agents and 12 deterministic workflows, built on the UnifyApps Solution Builder and connected only through the enterprise context graph. This spec covers how they connect, what each one does and what it plugs into, and how to build each one.	Pipeline-Factory-Engineering-Build.docx § Pipeline Factory: Engineering Build Spec · 2026-10-31	Gourav Mahunta
A2	The dashed fast lane lets a strong signal skip the daily batch and start a play within the hour.	Pipeline-Factory-Engineering-Build.docx § How the agents connect · 2026-10-31	Gourav Mahunta
A3	The left line is the learning loop: outcomes from sub-workflow 8 return as proposed weights (to 1 and 2), best examples and test variants (to 5), and objections (to 6), applied only after the Quality Grader and the Friday review.	Pipeline-Factory-Engineering-Build.docx § How the agents connect · 2026-10-31	Gourav Mahunta
A4	Why: every hand-off can then be seen in the control towers, checked by the Quality Grader, and stopped by a person.	Pipeline-Factory-Engineering-Build.docx § How the agents connect · 2026-10-31	Gourav Mahunta
A13	Model split: two AI model families. Every checker (Fact Checker, Message Grader, Reply Sorter, Meeting Labeler, Deal Qualifier, Quality Grader) runs on a different family from the drafter it checks. Each run has a cost cap, plus a daily spend cap.	Pipeline-Factory-Engineering-Build.docx § How the agents connect · 2026-10-31	Gourav Mahunta
A14	Locked fields: Patch ID, BDR of record, meeting type, meeting source, factory-sourced, factory-influenced and marketing-influenced are written only by workflows and lock at booking. Corrections go through RevOps, logged with a reason.	Pipeline-Factory-Engineering-Build.docx § How the agents connect · 2026-10-31	Gourav Mahunta
A15	Keeps every patch's named accounts clean, scored, in the right patch and current.	Pipeline-Factory-Engineering-Build.docx § The agents › 1. Patch accounts · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A16	Every 15 min pulls new and changed records, normalises keys (domain, legal name, LinkedIn ID, HubSpot ID, email), merges exact matches and scores near-matches 0–100. ≥95 merge; 80–95 to RevOps; <80 kept separate. Logs its reasoning	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Duplicate Finder”, column What it does · 2026-10-31	Gourav Mahunta
A17	Links each company to parent, subsidiaries, divisions; proposes divisions that buy separately (RevOps approves); sets the outreach lock at the top parent. Re-links on HQ change or M&A news. <80 → RevOps	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Parent Company Linker”, column What it does · 2026-10-31	Gourav Mahunta
A18	Finds the parent's HQ city, state, country; weighs sources; returns location, confidence, other candidates and evidence. <80 → RevOps picks	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Headquarters Finder”, column What it does · 2026-10-31	Gourav Mahunta
A19	Nightly on companies with move or M&A news, quarterly on all. Any change → alert in the patch control tower, then a new Patch Suggester proposal	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Headquarters Re-checker (monitor)”, column What it does · 2026-10-31	Gourav Mahunta
A20	Weekly closed-won lookalikes; daily checks 7 other sources (ecosystem lists, intent surges, web visitors, business units, champion job changes, event attendees, renewal windows). Drops fit <36, customers, open deals, partners, competitors, DNC. Suggests to RevOps, never adds. <70 not suggested	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “New Account Finder”, column What it does · 2026-10-31	Gourav Mahunta
A21	Scores fit out of 60 (up to 15 each: industry, size and complexity, core systems, AI and integration maturity); maps score + ICP V2 quadrant to best / medium / low fit. Floor 36 never moves. Re-scores on change and monthly. <70 → RevOps	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Fit Scorer”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A22	Proposes a patch for each new account or HQ change: geography first, then industry, with confidence and reason. Never writes a Patch ID. <80 → RevOps decides from evidence	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Patch Suggester”, column What it does · 2026-10-31	Gourav Mahunta
A23	Finds integration, automation and agent tools each best/medium-fit account uses, from vendor case studies, job posts, procurement notices. Weekly. <60 tagged [HYPOTHESIS]	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Current Vendor Finder”, column What it does · 2026-10-31	Gourav Mahunta
A24	Estimates renewal as 3 years from earliest evidence unless a later contract signal exists; raises a renewal signal 9 months before. <60 no signal	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Renewal Date Finder”, column What it does · 2026-10-31	Gourav Mahunta
A25	Drafts battlecard changes per vendor: shortfalls, switch path, proof, objection answers. Product marketing approves each	Pipeline-Factory-Engineering-Build.docx § 1. Patch accounts › table row “Battlecard Writer”, column What it does · 2026-10-31	Gourav Mahunta
A27	Decides which patch accounts start a play now. Strong signals start a play within the hour; the rest of each patch's slots fill every morning from its ranked list.	Pipeline-Factory-Engineering-Build.docx § The agents › 2. Account selection · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A28	Watches continuously: web visits and intent, Bombora surges, Sales Navigator alerts, hiring and tech changes, job changes, leadership news, earnings calls, press, renewal signals, event sign-ups. Records company, type, date, source link, strength; verifies company match and date; scores confidence. Strong signals (champion job move, checked visit, new leader, renewal, event, several people engaging) go straight to the Play Picker. <70 logged, not scored. Signals fade over 30 days	Pipeline-Factory-Engineering-Build.docx § 2. Account selection › table row “Buying Signal Spotter”, column What it does · 2026-10-31	Gourav Mahunta
A29	Turns signals into a timing score (max 40) with the weights below. Monday 06:00 ranks each patch by fit + timing. Daily 07:00 tops up each patch's batch after fast-lane plays and sends it to Gate 1 with each account's top 3 signals. Applies the checked-visit rule	Pipeline-Factory-Engineering-Build.docx § 2. Account selection › table row “Account Ranking (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A30	Monday after ranking: base 25 slots per patch; never more than eligible accounts ÷ 13; floor 15, cap 40; pace boost (up to +50%) only to patches behind on intro meetings whose diagnosis stops at Input or Engagement and whose AE has <6 intros booked in 7 days. Fast-lane plays use their own patch's slots; overflow takes spare capacity, then that patch's lowest-ranked accounts, never another patch's base. AE nominations (max 3/week) start inside their patch's slots. Logs every allocation	Pipeline-Factory-Engineering-Build.docx § 2. Account selection › table row “Weekly Slot Planner (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A31	After allocation, randomly holds back 10% of each patch's new medium/low-fit plays with a logged weekly seed. Checks treated vs held-out balance on fit and timing (standardised difference <0.1) or redraws. Flags held accounts in graph and HubSpot with a 90-day end date. Reports at 90 and 180 days	Pipeline-Factory-Engineering-Build.docx § 2. Account selection › table row “Holdout Picker (workflow)”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A32	Batch lands in the BDR's to-do list at 07:00 with fit band, timing, top 3 signals, Patch ID, AE, last touch, slots left. Accept or reject by 10:00 with one reason (bad fit, active deal, wrong timing, already in conversation). A rejected slot refills from the same patch. Hard blocks: no Patch ID / AE / pod, on an AE hold, or held out	Pipeline-Factory-Engineering-Build.docx § 2. Account selection › table row “Gate 1 (human: pod BDR)”, column What it does · 2026-10-31	Gourav Mahunta
A33	Starting signal weights (Scoring Tuner updates monthly): checked pricing/product visits (2+ in 14 days) 25 · new CIO/CTO/CDO/CAIO/Head of AI in 90 days 20 · event or webinar attendance 20 · hiring for AI platform, automation, integration roles 15 · earnings naming AI, automation, modernisation or cost-cutting 15 · Bombora surge 15 · interest in a current vendor's tool 15 · vendor renewal within 9 months 15 · funding, merger or new market 10 · executive posts on AI programs 10.	Pipeline-Factory-Engineering-Build.docx § The agents › 2. Account selection · 2026-10-31	Gourav Mahunta
A34	Checked visit: counts only with 10+ seconds and a scroll, or a repeat visit within 7 days. Never counts visits within 2 minutes of an email's delivery, from security-scanner networks, or with no page interaction.	Pipeline-Factory-Engineering-Build.docx § The agents › 2. Account selection · 2026-10-31	Gourav Mahunta
A35	Keeps a sourced view of every patch account current: best fit refreshed every 30 days, others every 90, and on new filings or press. Runs on Day 1 in parallel with the buying committee.	Pipeline-Factory-Engineering-Build.docx § The agents › 3. Account research · 2026-10-31	Gourav Mahunta
A36	Reads the latest annual report and investor deck, last two earnings call transcripts, 12 months of press, current AI/IT/automation job posts. Extracts statements on AI, automation, integration, modernisation, cost, CX, risk. Each fact keeps exact quote, page or timestamp, date, link. Drops anything >12 months old (except the latest annual report). Facts without quote + link are rejected	Pipeline-Factory-Engineering-Build.docx § 3. Account research › table row “Company Facts Collector”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A37	Finds candidate VEP-CFC use cases for the industry and core systems; scores evidence; keeps the top 3 with two supporting facts (or one fact + the company's engagement with us); tags each with pattern and outcome. <70 shown only as a question, never a claim	Pipeline-Factory-Engineering-Build.docx § 3. Account research › table row “Use Case Matcher”, column What it does · 2026-10-31	Gourav Mahunta
A38	Writes: business problem in the company's own words, impact (no dollar figures), why now (top signals), why UnifyApps (use case + their core systems), closest proof, main and backup angle, risks (e.g. vendor contract). Every sentence cites a fact or is tagged [HYPOTHESIS]. <70 → BDR reviews at Gate 2	Pipeline-Factory-Engineering-Build.docx § 3. Account research › table row “Case for Change Drafter”, column What it does · 2026-10-31	Gourav Mahunta
A39	Rules: VEP-CFC is the only source of use cases (UC-ID + Blueprint link + account evidence). Guesses are tagged [HYPOTHESIS] and reach prospects only as questions. Conflicting sources are shown side by side, never settled by the agent. Two rule steps also run here: a graph query pulling past contact (events, downloads, visits, calls, past deals, loss reasons), and an account tagger (vertical, Patch ID, size, systems, vendors, AI maturity, fit band, pattern, outcome).	Pipeline-Factory-Engineering-Build.docx § The agents › 3. Account research · 2026-10-31	Gourav Mahunta
A40	Maps 12 people per account, writes a note on each, gets verified contact details, screens them, and looks for a warm intro before anything goes cold.	Pipeline-Factory-Engineering-Build.docx § The agents › 4. Buying committee · 2026-10-31	Gourav Mahunta
A41	Loads the industry's default titles plus BDR edits; searches people at the company and division; assigns role (economic buyer, champion, technical evaluator, business owner, gatekeeper); checks the champions library; picks 3 Tier 1, 3 Tier 2, 4 Tier 3, 2 backups; flags the economic buyer. Gatekeepers mapped, never contacted. Job-change alerts promote a backup; a title the BDR removes 3× in an industry drops from its defaults. <70 on a role → BDR checks at Gate 2	Pipeline-Factory-Engineering-Build.docx § 4. Buying committee › table row “Buying Team Mapper”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A42	Four-line note per person: role, time in role, past companies, public talks and posts; what they own ([HYPOTHESIS] unless public); link to the matched use case; past touches; nearby event fit. Professional info only. Refresh every 90 days and on job change. <70 flagged at Gate 2	Pipeline-Factory-Engineering-Build.docx § 4. Buying committee › table row “Person Notes Writer”, column What it does · 2026-10-31	Gourav Mahunta
A43	For Tier 1 at best-fit accounts: finds shared work history with customer execs, partners, employees and AEs; uses opt-in LinkedIn connection exports (monthly) plus partners, SIs, investors. Ranks: worked together > overlapped > friend of a friend. Drafts the intro request into the patch AE's to-do list and holds cold touches to that person 7 days. <60 not suggested	Pipeline-Factory-Engineering-Build.docx § 4. Buying committee › table row “Intro Finder”, column What it does · 2026-10-31	Gourav Mahunta
A44	Sends each person to the Sprouts plugin → verified work email, plus phone for Tier 1 and engaged people. No verified email → LinkedIn only. Saves with source and verify date to graph and HubSpot; re-verifies emails older than 90 days before use	Pipeline-Factory-Engineering-Build.docx § 4. Buying committee › table row “Contact Finder (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A45	One suppression list (opt-outs, bounces, complaints, legal holds); copies it to HubSpot, Apollo and Sprouts every 15 min; screens every phone against federal and state DNC before any dialler; records consent per person; completes erasure across all tools within 30 days, keeping only a hashed code so the person is never re-added	Pipeline-Factory-Engineering-Build.docx § 4. Buying committee › table row “Do-Not-Contact List (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A46	Best-fit accounts reach the AE's to-do list on Day 1 with account view and buying team (~5/week/patch). Approve, adjust or disqualify by Day 2 12:00; else backup AE, then Geo leader, before Gate 2 closes	Pipeline-Factory-Engineering-Build.docx § 4. Buying committee › table row “AE checkpoint (human: patch AE, best fit only)”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A47	Picks the play, builds the account's Art of the Possible page, writes every touch, checks it, and holds it for the BDR at Gate 2. Runs on Day 2; nothing sends until Gate 2 clears.	Pipeline-Factory-Engineering-Build.docx § The agents › 5. Outreach drafting · 2026-10-31	Gourav Mahunta
A48	Matches the signal (or the 13-week cycle) to a play; sets people, channels, start days; spaces tiers so no two people at one account get email the same day; picks senders only from the account's patch and pod (AE for Tier 1 LinkedIn and AE notes, BDR for the rest, executive sponsor for C-level). Also receives fast-lane signals. <70 → BDR picks at Gate 2	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Play Picker”, column What it does · 2026-10-31	Gourav Mahunta
A49	Builds one Art of the Possible page per account: operations from public facts only, 2–3 workflows reimagined (before/after) for the matched use cases, proof, how UnifyApps connects their core systems, a patch event. Button books a 60-min session with the patch AE + solution consultant. Fills marketing's locked template; page is noindex, at a hard-to-guess URL, with a tracked link per prospect. <75 → marketing ops checks	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Page Builder”, column What it does · 2026-10-31	Gourav Mahunta
A50	Picks one Content Factory asset per asset touch, matched on role, industry, use case, pattern, outcome, VEP stage, Geo; skips assets >18 months old or retired; ranks by fit and positive-reply history for that role; never the same asset to two people at one account in a week; adds an event only while seats remain. <70 → no asset, use a sourced insight	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Content Picker”, column What it does · 2026-10-31	Gourav Mahunta
A51	Writes every email and LinkedIn message in the play. Starts from the Content Factory's best message for category → sub-sector → company → persona and must agree with all four; uses the assigned handbook voice; one sourced fact, the pain this person owns, the likeliest objection for their role. Names the patch AE as session host. Pod-inbox emails in the BDR's name; AE notes from the AE's mailbox, warm plays only. <70 flagged at Gate 2	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Message Writer”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A52	Traces every claim in drafts and pages: facts to a public source ≤12 months old, numbers to a source or the proof library, use cases to a UC-ID with account evidence. Blocks anything untraceable	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Fact Checker (checker, other model family)”, column What it does · 2026-10-31	Gourav Mahunta
A53	Scores each draft 0–100 on the message rubric: teaches something, relevant to role and company, actionable, applies to their business, well written in the right voice, follows copy rules. <75 → one automatic rewrite and regrade; <75 again → a person decides at Gate 2. Rubric weights checked monthly against replies	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Message Grader (checker, other model family)”, column What it does · 2026-10-31	Gourav Mahunta
A54	Blocks any draft that fails: clean text (no empty fields, wrong names incl. the AE's); person still in role (checked within 7 days of first send); not on DNC, held out, a customer or open deal; parent outreach lock owned by this owner; Patch ID, AE, pod present and no AE hold; sender from the account's pod and under their daily limit across all pods; person not in another sequence; state send window, consent, legal footer	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Send Rules Check (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A55	One screen per account: account view, buying team, page preview, every draft with grade, fact and rule results (~5% carry planted test errors that never send). BDR approves, edits, swaps a person or holds, by 17:00 Day 2	Pipeline-Factory-Engineering-Build.docx § 5. Outreach drafting › table row “Gate 2 (human: pod BDR)”, column What it does · 2026-10-31	Gourav Mahunta
A56	Copy rules the Message Writer enforces: subject 3–6 words built on the prospect's trigger; emails 90–120 words; connection notes <250 characters; open on the business problem, not AI; one insight + one question; guesses only as questions; no em dashes, placeholders or invented statistics; goodbye notes say we won't reach out for a while.	Pipeline-Factory-Engineering-Build.docx § The agents › 5. Outreach drafting · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A57	Baseline sequence (Tier 2 starts 2 days after Tier 1, Tier 3 two days after that; Tier 1 gets email, LinkedIn, call; Tier 2 email, LinkedIn; Tier 3 email only):	Pipeline-Factory-Engineering-Build.docx § The agents › 5. Outreach drafting · 2026-10-31	Gourav Mahunta
A58	Sends every approved touch on Day 3 in the prospect's local morning: email and calls through Apollo, LinkedIn through the Sprouts plugin. Re-plans the account as people respond and protects the inboxes.	Pipeline-Factory-Engineering-Build.docx § The agents › 6. Outreach · 2026-10-31	Gourav Mahunta
A59	Puts each approved person into channels: email steps into an Apollo sequence on the assigned inbox, LinkedIn steps into the sender's Sprouts queue, calls as Apollo call tasks. Schedules in the prospect's local morning and state window, keeping tier spacing. Holds every inbox and LinkedIn sender at 70% of daily limit. Writes owner, Patch ID, BDR of record, sequence status, tasks, notes to HubSpot; sets the parent outreach lock. Every write keyed on person + play (no double enrolment)	Pipeline-Factory-Engineering-Build.docx § 6. Outreach › table row “Outreach Launcher (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A60	For each call task (Tier 1 day 6, Hot Visit, anyone engaged): adapts the BDR's best script or builds one from top Gong calls; writes signal-tied opener, permission question, 3–5 discovery questions, top 3 objection answers, 20-second voicemail, follow-up email draft. Orders each BDR's call list by interest inside each patch's time-zone block. <70 → BDR approves the script	Pipeline-Factory-Engineering-Build.docx § 6. Outreach › table row “Call Script Writer”, column What it does · 2026-10-31	Gourav Mahunta
A61	Keeps the account one conversation once anyone responds: a referral becomes the lead thread; a Tier 1 objection pauses Tiers 2–3 and gives the AE an answer note; 2+ people engaging in 7 days switches to Committee Surge. Every rewrite goes back through Fact Checker and Message Grader. <70 → BDR decides	Pipeline-Factory-Engineering-Build.docx § 6. Outreach › table row “Follow-up Planner”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A62	Weekly inbox-placement tests per active domain (Gmail, Outlook, Microsoft, Barracuda, Proofpoint); daily blacklist and Gmail reputation checks; reply rate by recipient provider; maintains the email-security-scanner list. Every alert to the BDR and GTM engineer	Pipeline-Factory-Engineering-Build.docx § 6. Outreach › table row “Inbox Health Checker”, column What it does · 2026-10-31	Gourav Mahunta
A63	Rests a domain the same day if placement <70% in two tests or it hits a major blacklist, and swaps in a warmed spare. Blocks a new BDR's first send until their domains pass. Previously blacklisted domains are retired	Pipeline-Factory-Engineering-Build.docx § 6. Outreach › table row “Email Domain Swapper (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A64	LinkedIn bans third-party automation, so people send. Each opens their Sprouts queue (messages pre-written and checked), reviews and sends from their own account. AE ~20 requests/day for own patch. A restriction warning → stop and report; tower pauses that sender. Unsent AE messages move to the BDR at day end	Pipeline-Factory-Engineering-Build.docx § 6. Outreach › table row “LinkedIn senders (human: AEs, BDR, exec sponsor)”, column What it does · 2026-10-31	Gourav Mahunta
A65	Sending limits: each BDR sends on 16 inboxes across 4 UnifyApps-branded secondary domains, ≤40 emails per inbox per day, with 2 warm spare domains (8 inboxes). SPF, DKIM, DMARC and one-click unsubscribe on every domain. New inboxes ramp 10/20/30/40 per day over 4 weeks. LinkedIn: ≤22 connection requests per person per day across all pods. One stop signal: a reply in Apollo or Sprouts stops every channel for that person in both tools within minutes.	Pipeline-Factory-Engineering-Build.docx § The agents › 6. Outreach · 2026-10-31	Gourav Mahunta
A66	Handles replies, books and hands off meetings, and labels and qualifies them. Engage = a reply becomes an intro meeting; Connect = an intro becomes a New Buyer Meeting; Commit = a qualified opportunity.	Pipeline-Factory-Engineering-Build.docx § The agents › 7. Engage, Connect and Commit · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A67	Watches every pod inbox (Apollo) and LinkedIn reply (Sprouts); classifies into 9 types: positive, referral, not now (with date), objection, wrong person, out of office, unsubscribe, bounce, auto-reply. Stops all channels for that person in both tools and tells the Follow-up Planner. Handles mechanical types itself: OOO moves the next touch to the return date; unsubscribe to DNC within 15 min; bounce triggers re-check + backup person; "not now" to Content Handoff. <90 on unsubscribe → treated as unsubscribe; <80 on anything else → a person sorts it	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “Reply Sorter (checker)”, column What it does · 2026-10-31	Gourav Mahunta
A68	Drafts the answer from the thread, account view, objection list and the AE's booking link; puts it with confidence in the BDR's to-do list (and the AE's for positive replies at best-fit accounts). The person sends, edits, adds a booking link, hands to the AE, or snoozes, from one screen; it goes out from the original thread. Reminder at 90 min; Geo leader alerted at 2 business hours. <70 marked for full rewrite	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “Reply Writer”, column What it does · 2026-10-31	Gourav Mahunta
A69	On booking via the AE's link: creates the deal at Engage owned by the patch AE; picks up meetings booked elsewhere from the AE's Google Calendar within 15 min. Locks Patch ID, BDR of record, meeting source, factory-sourced, factory-influenced (a rejected meeting rebooked within 30 days keeps its source). Books the SC, triggers the prep pack, sends agenda and 24h/1h reminders, runs a 2-touch reschedule on no-show. Runs AE deadlines (below) and escalations	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “Meeting Handoff and Deadlines (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A70	Builds the pack for AE and SC: account view, buying team, thread, Case for Change draft, likely objections, AotP page, questions to confirm economic buyer and timeline. Delivered into the AE's AI Twin, which then tracks promises made on the call	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “Meeting Prep Writer”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A71	Reads transcript, attendees, economic-buyer flag; labels intro / New Buyer Meeting / doesn't count, quoting evidence. Doesn't count if <20 min, no Tier 1–2 attendee, a reschedule, or a second intro at the account within 90 days. Unrecorded meetings labelled from calendar attendees and AE notes and marked unrecorded. <80 → Geo leader checks	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “Meeting Labeler (checker)”, column What it does · 2026-10-31	Gourav Mahunta
A72	After each New Buyer Meeting checks six requirements: fit 36+, a VEP-CFC pain, engaged champion, New Buyer Meeting held, timeline ≤12 months, scheduled mutual next step. Marks each met / partly / missing with transcript quotes; lists gaps with the question that closes each; drafts the recap; recommends Qualified only when all are met. Saves won/lost outcomes and reasons to the graph. <80 → recommended not qualified, with gaps	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “Deal Qualifier (checker)”, column What it does · 2026-10-31	Gourav Mahunta
A73	AE confirms meeting label and stage within 2 business days; deal moves to Commit	Pipeline-Factory-Engineering-Build.docx § 7. Engage, Connect and Commit › table row “AE confirm (human)”, column What it does · 2026-10-31	Gourav Mahunta
A74	Deadlines the workflow enforces (AE's business hours; reminder at half-window, escalation on miss): accept or reject a meeting within 1 business day (else Geo leader in 4h or backup AE takes it) · decide within 2 business days of every held meeting · stale after 5 idle business days at Engage · alert at 30 days in Connect, 45 days in Commit without a next step · one stage at a time, only with exit fields filled.	Pipeline-Factory-Engineering-Build.docx § The agents › 7. Engage, Connect and Commit · 2026-10-31	Gourav Mahunta
A75	Learns from every outcome, grades every agent, and turns red lines into actions. Learning agents only propose; the Quality Grader checks each proposal and the Friday review approves. Only weight changes within ±20% apply on their own, after 8 weeks without a drop.	Pipeline-Factory-Engineering-Build.docx § The agents › 8. Learning and governance · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A76	Every touch is saved with its result: patch, signal, play, persona, tier, use case, pattern, outcome, subject, asset, sender, send time → reply type, meeting label, qualified, won/lost, deal size.	Pipeline-Factory-Engineering-Build.docx § The agents › 8. Learning and governance · 2026-10-31	Gourav Mahunta
A77	Weekly: promotes messages with 3+ positive replies into the Message Writer's examples for that role and industry; shares them with the Content Factory. <3 positives → not promoted	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Winning Message Finder”, column What it does · 2026-10-31	Gourav Mahunta
A78	Monthly: re-fits fit and signal weights to meetings and qualified opportunities, learning from Gate 1 rejections, AE-rejected meetings, disqualifications, win/loss reasons. Learns across all patches, reports per patch. Proposals only	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Scoring Tuner”, column What it does · 2026-10-31	Gourav Mahunta
A79	Updates the objection list and buyer language from call transcripts. <70 → sales reviews	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Objection Collector”, column What it does · 2026-10-31	Gourav Mahunta
A80	Small changes (subject, opener, asset): continuous tests on positive replies, ≥20% traffic per version, 4-week limit. Bold changes: fixed-size tests on people (5%→8% reply needs ~1,060 people per version). Never tests one-point lifts	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “A/B Tester”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A81	Holds every agent's rubric and test set; runs them on every prompt, model or weight change and blocks a release on any drop. Enforces checker-on-other-model. Computes each gate's rung weekly per pod and AE. Drafts a policy when the same exception is resolved the same way 3 times	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Quality Grader (checker)”, column What it does · 2026-10-31	Gourav Mahunta
A82	Weekly: compares each agent to its baseline on block/edit rate, factual errors, grades, confidence calibration; alerts the GTM engineer on any slip	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Agent Monitor”, column What it does · 2026-10-31	Gourav Mahunta
A83	Plants errors (e.g. wrong patch AE, sender from wrong pod) in ~5% of Gate 2 items, which never send; scores each reviewer's catch rate	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Test Error Planter”, column What it does · 2026-10-31	Gourav Mahunta
A84	Every 15 min reads tower metrics; on a red line takes the listed action (pause, throttle, move slots, demote a gate, add a to-do item); escalates unfixed alarms patch → pod (2 business days) → Geo (5) → CRO. Logs before/after numbers. Safety actions are automatic; resuming or moving anyone's work needs a person	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Alarm and Escalation (workflow)”, column What it does · 2026-10-31	Gourav Mahunta

Id	Words, verbatim	Source	Proposed owner
A85	Monday: pushes accounts in play to LinkedIn ad audiences by patch geography for 8 weeks; passes unreached people to the Content Factory (ads and content only, never cold email); moves "not now" and engaged prospects to nurture until their date; sets marketing_influenced; sends asset, message and pattern results by patch weekly	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Content Handoff (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A86	Recording consent per state; DNC checks; state legal checklists (send window, consent, footer); erasure across every tool within 30 days; 12-month clean-up of people who never engaged	Pipeline-Factory-Engineering-Build.docx § 8. Learning and governance › table row “Privacy and Consent (workflow)”, column What it does · 2026-10-31	Gourav Mahunta
A88	Every agent goes through these ten steps on the Solution Builder; deterministic workflows skip steps 5–8 and instead need a fixed test set that passes in full.	Pipeline-Factory-Engineering-Build.docx § How to build each agent on UnifyApps · 2026-10-31	Gourav Mahunta
A89	Register first. Search the master registry; reuse if it exists, else register with plain name, owner and parent workflow to get its ID.	Pipeline-Factory-Engineering-Build.docx § How to build each agent on UnifyApps › ten steps · 2026-10-31	Gourav Mahunta

3. Open questions

What nobody has said yet

1. What will the client count as success for this demo?

- (recommended) The spec's own shape: one account moves end to end through the factory (signal, Gate 1, research and buying team, Gate 2 drafts with grades and rule checks, a booked meeting) with every hand-off visible as a confidence-scored record a person can stop (A1, A4, A8)
- The profile's default: an approval that routes by a rule, an AI assistant over live data, clean tables

2. When is the demo, or the next date this is shown? Nothing in the channel, the spec or the profile names one.

- (recommended) Tell us the date and the slot
- No date yet: plan for the profile's 20-minute in-person slot

Scope

3. The spec covers 38 agents, 12 workflows and 5 human gates (A1); a 20-minute demo cannot run them all live. Which slice is built live?

- (recommended) One account's path through sub-workflows 2 to 5 live (Buying Signal Spotter, Account Ranking, Gate 1, Company Facts Collector, Buying Team Mapper, Case for Change Drafter, Message Writer, Fact Checker, Message Grader, Send Rules Check, Gate 2), the rest shown as seeded records in a control tower
- One sub-workflow in full depth
- All 50 components as a registry and control tower with seeded runs and a handful live

Sources

4. The spec names a source document, "Pipeline Factory Final Blueprint — Patches and Pods (Oct 28, 2026)", and a "Hand-off register below" (A5) that the shared file does not hold.

- (recommended) Work from the spec's Feeds columns as the hand-off list, as its diagram note says
- Share the blueprint and the register in the channel before G2

5. Orbit holds an earlier POC for the same use case (POC-unifyapps-pipeline-factory-20261030) with a Requirements v1 r1 and a Plan v1 r1. Should its asks or decisions carry into this POC?

- (recommended) No: this POC stands on the spec shared in #pipeline-factory-v1 (name anything to carry over)
- Yes: carry the earlier POC's asks forward as a feedback round

Owner

6. The spec was written by Hardik (byline, Oct 28, 2026); the asks are proposed to the POC lead. Who owns them?

- (recommended) Gourav Mahunta owns all asks, Hardik is the subject expert consulted on them
- Hardik owns the asks in sub-workflows 1 to 8, Gourav the rest

4. Other use cases mentioned

Reply "promote A<n>" to bring one into this use case.
